MAX22513 Evaluation Kit

Evaluates: MAX22513

General Description

The MAX22513 evaluation kit (EV kit) consists of the evaluation board and software. The EV kit is a fully assembled and tested circuit board that evaluates the MAX22513 IO-Link® device transceiver with integrated DC-DC buck regulators.

The EV kit includes Windows®-compatible software that provides a graphical user interface (GUI) for exercising the features of the MAX22513. The EV kit is connected to a PC through a USB-A-to-micro-B cable.

Features

- IO-Link-Compliant Device Transceiver
- I/O, I²C, and SPI Interface Terminals
- Arduino® Compatible Connector
- Windows 10-Compatible Software
- USB-PC Connection
- Proven PCB Layout
- Fully Assembled and Tested

***Ordering Information* appears at end of data sheet.**

Arduino is a registered trademark of Arduino, LLC.

IO-Link is a registered trademark of Profibus User Organization (PNO).

Windows is registered trademark and registered service mark of Microsoft Corporation.

Quick Start

Recommended Equipment

- MAX22513 EV kit (USB-A-to-micro-B cable included)
- User-supplied Windows 10 PC with a spare USB port
- 24V, 1A DC power supply
- Multimeter/voltmeter

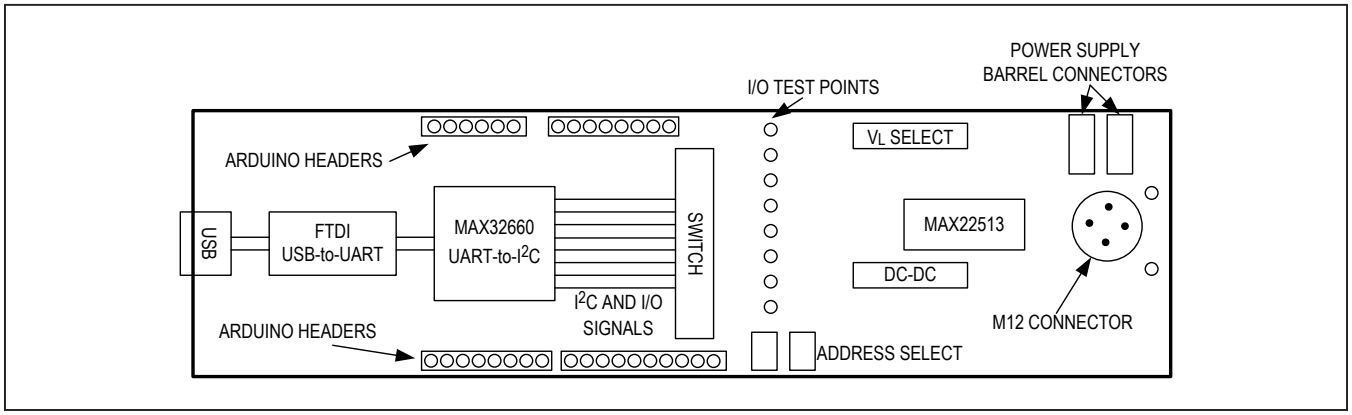
Note: In the following sections, software-related items are identified by bolding. Text in **bold** refers to items directly from the EV kit software. Text in **bold and underlined** refers to items from the Windows operating system.

Procedure

The EV kit is fully assembled and tested. Follow the steps below to verify board operation before exercising the full features of the device:

1) Visit **www.maximintegrated.com/evkitsoftware** to download the latest version of the EV kit software, MAX22513EVKITSetupVx.xx.ZIP. Save the EV kit software to a temporary folder and uncompress the ZIP file.
2) Install the EV kit software and USB driver on your computer by running the MAX22513EVKITSetupVx.xx.EXE program inside the temporary folder. The program files are copied to your PC and icons are created in the Windows **Start | Programs | Maxim Integrated** menu. During software installation, some versions of Windows can show a warning message indicating that this software is from an unknown publisher. This is not an error condition and it is safe to proceed with installation. Administrator privileges are required to install the USB device driver on Windows.

MAX22513 EV Kit Block Diagram



3) Verify that all the jumpers are in their default positions, as shown in Table 1.
4) Connect the 24V DC power supply to the V_{24} (TP24) and GND (TP7) barrel connectors or to the V_{24} (TP1) and GND (TP9) test points on the EV kit board.
5) Connect the multimeter to the V_5 testpoint (TP22)
6) Turn on the V_{24} power supply. Ensure that the voltage on V_5 (TP22) is 5V.
7) Connect the USB cable from the PC to the EV kit board. A Windows message appears when connecting the EV kit.
8) Start the EV kit software by opening its icon in the Windows **Start | Programs | Maxim Integrated** menu. The EV kit software main window appears, as shown in Figure 1.
9) Verify that **Status: MAX32660 Connected, MAX22513 ADR = 0x68** is displayed on the status bar at the bottom left of the main window (Figure 1).
10) Click on the Include Interrupt Register box to include the INTERRUPT register in serial interface reads. Click on the **Read All button** to read all of the registers in the device.
11) Select a register in the top register table to access the bits in that register.
12) Set the individual bits for that register by selecting available settings from the drop-down menu for each bit in the lower register table.
13) Press the **Write Modified** button on the GUI to write the registers that have been changed to the MAX22513.

Detailed Description of Software

Configuring the Registers

Click on a register name in the top register table to access the individual bits in that register. When the register name is selected in the register table, the lower register table shows the individual bits for that register. Click on the drop-down menu next to each bit in the lower table to select the bit setting. When all of the bits are set as desired, click on the Write Modified button to write the changed bit settings to the MAX22513 over the I²C interface.

Note that full IO-Link communication is not available using the EV kit GUI.

I/O Pin Control

The IO-Link UART I/Os (TXEN, TX, RX, LO/LI) and notification interrupt ($\overline{IRQ}$ and $\overline{WU}$) pins can be controlled and read on the MAX22513 EV kit GUI. Click on the toggle buttons next to TXEN, TX, and LO/LI (DO_EN = 1) to set these pins on the EV kit board to high (V_L) or low (GND).

When an interrupt is triggered, a bit in the INTERRUPT register is set and $\overline{IRQ}$ asserts low. A yellow tag appears in the I/O Pins box stating “Interrupt Received” (Figure 2). Read the INTERRUPT register to clear the interrupt and deassert $\overline{IRQ}$.

When a wake-up event is detected, and the WUINT is not masked in the INTERRUPT register (WUM = 0), the wake-up interrupt bit is set in the INTERRUPT register and a yellow tag appears in the I/O Pins box stating “Wak-Up Received.” $\overline{IRQ}$ also asserts. Read the INTERRUPT register to clear the interrupt and deassert $\overline{IRQ}$. the green box next to WU flashes orange briefly and then turns green again.

Detailed Description of Hardware

The MAX22513 EV kit includes the MAX22513 dual-channel IO-Link transceiver and the external components for evaluating the device. The EV kit is configured for I²C operation by default. All logic-level I/Os and IO-Link capable I/Os are available on yellow test points.

Logic-Level Power Supply

The MAX22513 features an internal 3.3V linear regulator which can drive loads up to 50mA. Set V_L = 3.3V on the J6 jumper to set the logic level supply (V_L) for the I/O pins.

To use a different logic-level voltage supply, open the J6 jumper and apply the external supply to the V_L testpoint (TP23). *Ensure that V_L does not exceed 3.3V to protect the MAX32660.*

Selecting the Device Address

The MAX22513 includes two address pins for I²C addressing, allowing up to four devices on a single bus. Set the I²C address for the MAX22513 on the MAX22513EVKIT by setting the SDI/A1 and $\overline{CS}$/A0 jumpers (J11 and J8, respectively). Click the Rescan I2C Adr button after the address has been changed to reestablish I²C communication.

Using I²C or SPI Interface with an External Master Controller

The MAX22513 EV kit includes an isolated USB-to-serial interface circuit for communication with the PC/GUI, and is configured to operate with the I²C serial interface when using the on-board FTDI converter and Maxim MAX32660 microcontroller. Arduino headers are available to use the board with an external controller.

To use an external SPI or I²C controller with the MAX22513, open all the switches on SW1 (set all switches to the left) and connect the external controller to the P5, P6, P7, and P8 headers. The MAX22513 EV kit is configured for I²C communication by default. To enable the SPI interface, remove the R23 resistor and place a 10kΩ resistor in R4 and remove the shunts on J8 and J11.

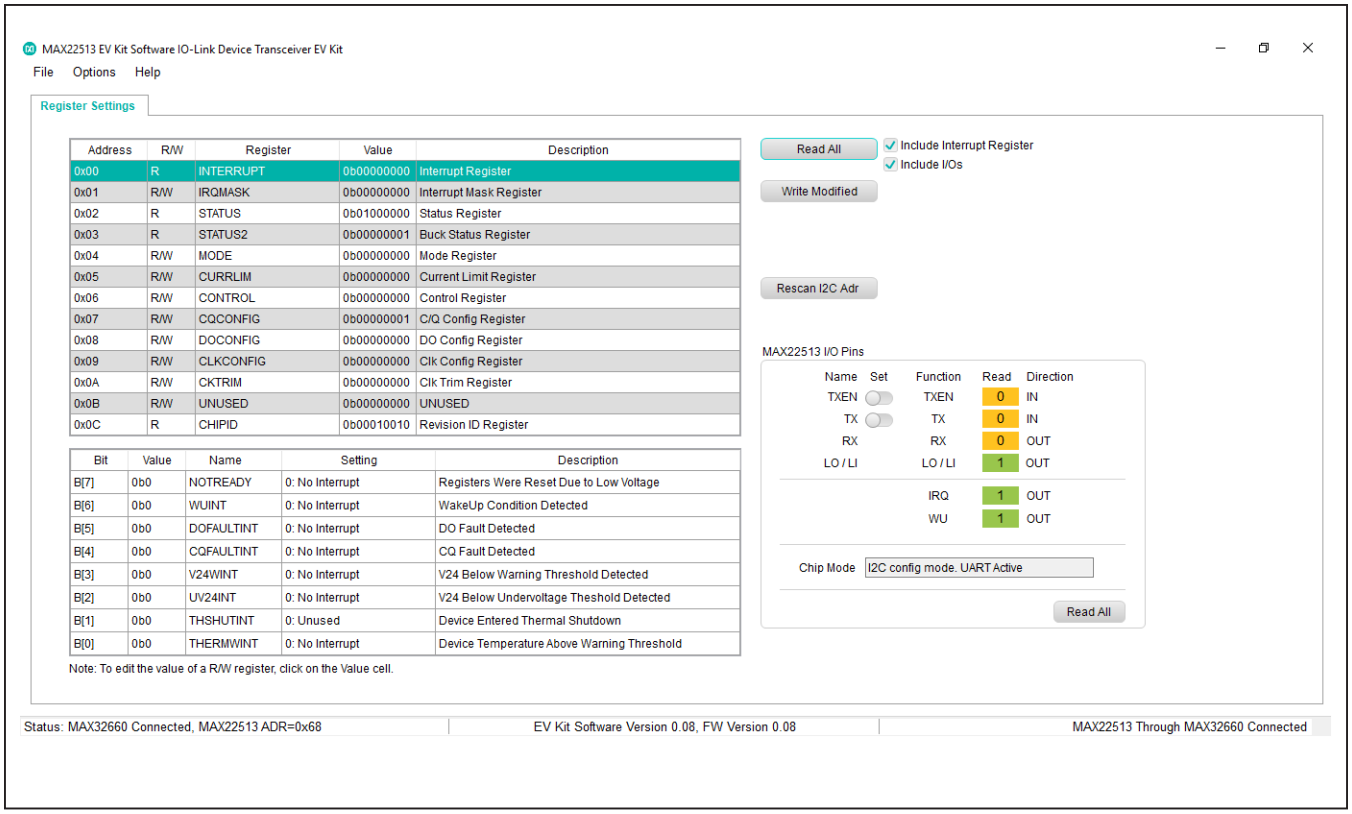


Figure 1. MAX22513 EV Kit Software, EV Kit is Connected

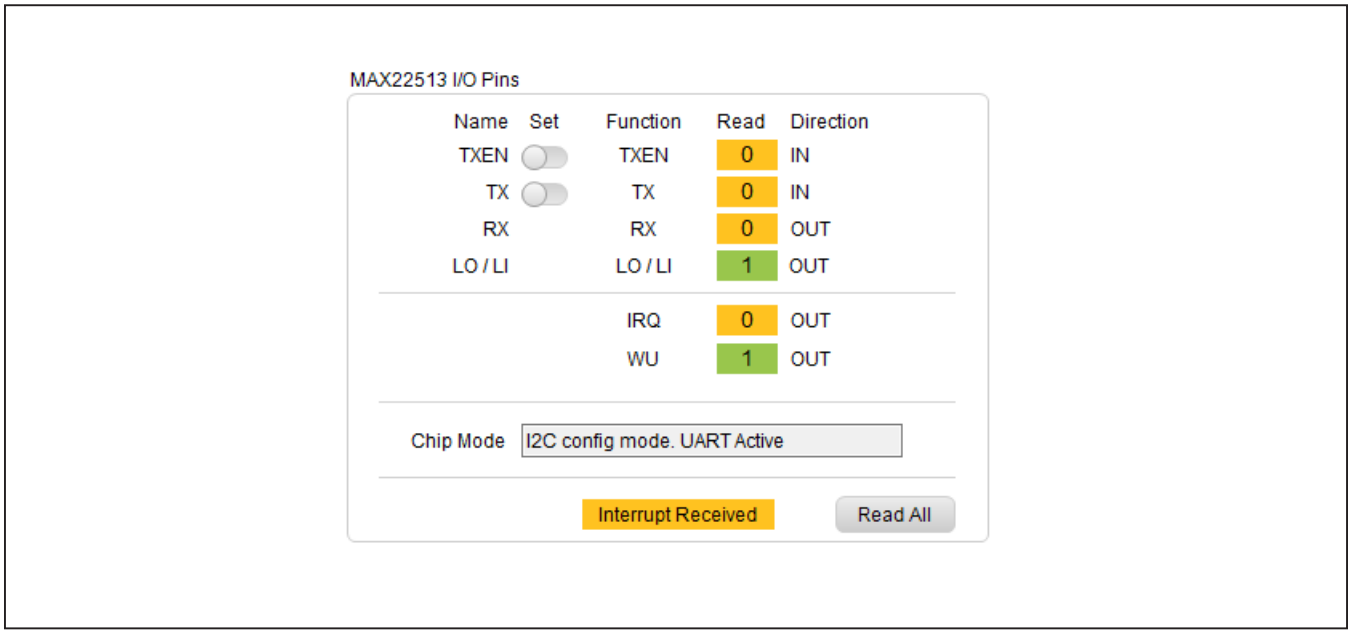

Figure 2. MAX22513 EV Kit Software, Interrupt Received

Table 1. Jumper Descriptions

JUMPER	SHUNT POSITON	DESCRIPTION
J1	1–2*	LIN is connected to the output of the DC-DC regulator.
	1–3	LIN is connected to PV24.
	1–4	LIN is connected to V_5. Connect an external 5V supply to V_5.
J2	Open*	FREQ is low
	Closed	FREQ is high
J3	Open*	$\overline{RESET}$ is pulled up to V_L through a 10kΩ resistor.
	Closed	$\overline{RESET}$ is low
J6	1–2	V_L is connected to V_5 (V_L = 5V)
	2–3*	V_L is connected to V_{33} (V_L = 3.3V)
J8	1–2	$\overline{CS}$/A0 is high
	2–3*	$\overline{CS}$/A0 is low
J10	1–2*	TXEN is high
	2–3	TXEN is low
J11	1–2	SDI/A1 is low
	2–3*	SDI/A1 is high
J15	Open	Do not use.
J16	1–2	MCLK is connected to the 32KIN input of the MAX32660.
	2–3*	Output of the on-board oscillator is connected to the 32KIN input of the MAX32660

**Default position.*

For pricing, delivery, and ordering information, please visit Maxim Integrated's online storefront at https://www.maximintegrated.com/en/storefront/storefront.html.

Maxim Integrated cannot assume responsibility for use of any circuitry other than circuitry entirely embodied in a Maxim Integrated product. No circuit patent licenses are implied. Maxim Integrated reserves the right to change the circuitry and specifications without notice at any time.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits,General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
