Definition of Measured Specifications

Parameter	Definition	Mathematical Representation for Pin Configuration 1	Mathematical Representation for Pin Configuration 2
Return Loss	The impedance match of the coupler to a 50Ω system. Return Loss is an alternate means to express VSWR.	Return Loss (dB)= $20 \log_{10}(S_{ii}) \quad i = 1, 2, 3, 4$	Return Loss (dB)= $20 \log_{10}(S_{ii}) \quad i = 1, 2, 3, 4$
Mean Coupling	At a given frequency (ω_n), coupling is the input power divided by the power at the coupled port. Mean coupling is the average value of the coupling values in the band. N is the number of frequencies in the band.	Coupling (dB) = $C = 20 \log_{10} S_{34} $ Mean Coupling (dB) = $\frac{\sum_{n=1}^N C(\omega_n)}{N}$	Coupling (dB) = $C = 20 \log_{10} S_{21} $ Mean Coupling (dB) = $\frac{\sum_{n=1}^N C(\omega_n)}{N}$
Insertion Loss	The input power divided by the sum of the power at the two output ports.	$10 \log_{10} (S_{14} ^2 + S_{34} ^2)$	$10 \log_{10} (S_{41} ^2 + S_{21} ^2)$
Transmission Loss	The input power divided by the power at the direct port.	$20 \log_{10} (S_{14})$	$20 \log_{10} (S_{41})$
Directivity	The power at the coupled port divided by the power at the isolated port.	$20 \log_{10} \left(\frac{ S_{24} }{ S_{34} } \right)$	$20 \log_{10} \left(\frac{ S_{31} }{ S_{21} } \right)$
Frequency Sensitivity	The decibel difference between the maximum in band coupling value and the minimum in band coupling value.	(Max Coupling (dB) – Min Coupling (dB))/2	(Max Coupling (dB) – Min Coupling (dB))/2

*100% RF test is performed on configuration 1 where port 1 is connected to pin1, port 2 is connected to pin 2, port 3 is connected to pin 5 and port 4 is connected to pin 6.

Mounting Configuration:

In order for Xinger surface mount components to work optimally, the proper impedance transmission lines must be used to connect to the RF ports. If this condition is not satisfied, insertion loss, Isolation and VSWR may not meet published specifications.

All of the Xinger components are constructed from organic PTFE based composites which possess excellent electrical and mechanical stability. Xinger components are compliant to a variety of ROHS and Green standards and ready for Pb-free soldering processes. Pads are Gold plated with a Nickel barrier.

An example of the PCB footprint used in the testing of these parts is shown below. In specific designs, the transmission line widths need to be adjusted to the unique dielectric coefficients and thicknesses as well as varying pick and place equipment tolerances.

Packaging and Ordering Information

Parts are available in reel and are packaged per EIA 481-2. Parts are oriented in tape and reel as shown below. Minimum order quantities are 4000 per reel. See Model Numbers below for further ordering information.
