Mechanical

Endurance 10,000 ON-OFF operations @ 6 per minute; with rated current & voltage. All G-Series circuit breakers will trip on overload, even when actuator is forcibly held in the ON position.

Trip Free The operating actuator moves positively to the OFF position when an overload causes the breaker to trip. With mid-trip, the handle moves to the mid position on electrical trip of the circuit breaker. With mid trip handle with alarm switch, handle moves to the mid position and the alarm switch actuates when the circuit breaker is electrically tripped.
