

### Description

This document describes the specifications for the F1792 Wideband, Gain-Settable, Zero-Distortion™ Flat-Noise™, RF to IF Downconverting Mixer.

The F1792 offers very low power consumption with excellent linearity. In addition to this the F1792 has four dynamically adjustable gain settings. The F1792 performance is exceptional across an extremely broad range of RF and IF frequencies. All of this makes it ideal for a myriad of applications including:

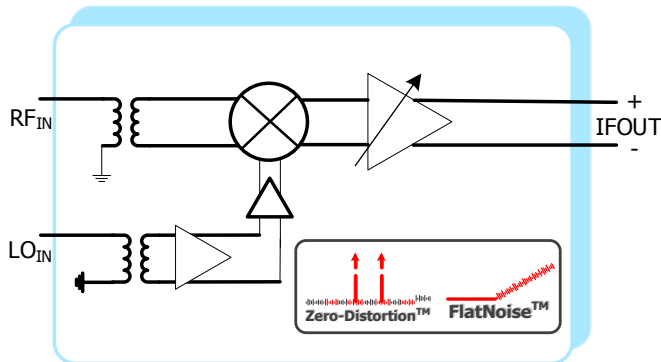

- 2G/3G/4G/5G/Multimode Remote Radio Units
- Point to Point  $\mu$ Wave Backhaul systems
- Broadband Repeaters
- Public Safety Infrastructure
- Any radio system operating between 400 MHz and 4000 MHz

### Competitive Advantage

F1792 offers maximum performance and flexibility at minimum power consumption. The unique and patented settable-gain feature allows it to be used in a very wide variety of radio card applications, even allowing for dynamic adjustment of gain to maximize performance on the fly. The extremely wide RF and IF bandwidths are achieved using a fixed BOM, all RF matching is internal to the device. The F1792 can function with as little as -6 dBm LO power. It also features a channel shutdown mode for ease of integration into high order TDD systems.

### Block Diagram

### Features

- RF range: 400MHz to 3800MHz
- LO range: 400MHz to 3600MHz
- IF Range: 50MHz to 600MHz
- 4 Gain Settings; 11dB, 8dB, 5dB, 2dB
- 2 bit gain step control
- Ideal for Multi-Carrier Systems
- +35dBm OIP3
- Low Noise Figure at any gain setting via IDT's FlatNoise™ technology
- Z = 200  $\Omega$  IF balanced, 50  $\Omega$  RF, 50  $\Omega$  LO single ended
- All internally matched. Single BOM for all RF, LO and IF frequencies
- 4 mm x 4 mm, 24-pin TQFN package
- Independent Path Standby mode
- 75 nsec settling for gain adjustment
- VCC = 3.3V, 462 mW, 373 mW (low power mode)

### Band Performance Summary

RF Frequency (MHz)	900	1900	2600	3500
Gain (dB, max G11 setting)	11.0	10.8	10.3	9.0
Gain (dB, min G2 setting)	2.5	2.3	1.8	0.5

## Pin Descriptions

**Table 1. F1792 Pin Descriptions**

Number	Name	Description
1	RF_IN	RF input. Matched to 50 ohms. DO NOT apply DC to this pin.
2	RF_IN_rtn	RF input transformer ground return. Ground this pin.
3, 4, 6, 8, 9, 10, 14	NC	Not connected.
5	GND	Ground this pin.
7, 18, 20, 24	VCC	Power Supply. Bypass to ground with appropriate capacitors as close as possible to pin
11	Gain_Select1	Gain select control pin, includes internal pull-down resistor. See gain select truth table for desired setting
12	Gain_Select2	Gain select control pin, includes internal pull-down resistor. See gain select truth table for desired setting
13	IFRef_Bias	Connect recommended resistor value from this pin to ground to set the IF amplifier reference current
15	LO_IN_rtn	LO input transformer ground return. Ground this pin.
16	LO_IN	Local Oscillator (LO) input. Matched to 50 ohms. DO NOT apply DC to this pin.
17	LO_ADJ	Connect zero ohm resistor to ground here for best performance
19	STBY	Standby Input (Low/Open = Power ON, High = Power OFF). Includes internal pull-down resistor
21, 22	IF_OUT-, IF_OUT+	Mixer Differential IF Output. Connect pull-up inductors from each of these pins to VCC (see the Typical Application Circuit)
23	IF_Bias	Connect the specified resistor from this pin to ground to set the bias for the Main IF amplifier
	— EP	Exposed Pad. Internally connected to GND. Solder this exposed pad to a PCB pad that uses multiple ground vias to provide heat transfer out of the device into the PCB ground planes. These multiple via grounds are also required to achieve the specified RF performance

## Absolute Maximum Ratings

**Table 2. Absolute Maximum Ratings**

Parameter	Symbol	Conditions	Minimum	Maximum	Units
VCC to GND	V <sub>CC</sub>		-0.5	+3.6	V

## Typical Performance Characteristics

### TYPICAL OPERATING CONDITIONS (TOC)

Unless otherwise noted, the following apply to the Typ Ops Graphs

- High Side Injection for RF frequencies below 1.2 GHz
- Low Side Injection for RF frequencies from 1.3 to 2.7 GHz
- 199MHz IF
- 800KHz Tone Spacing
- All measurements fully de-embedded for trace, connector, transformer losses
- Pin = -10dBm for Gain
- Pout = 0 dBm/Tone for IP3
- LO level = 0 dBm, VCC = 3.30 V
- Listed Temperatures are Case Temperature (TC = Case Temperature)
- Where noted, TA or TAMB = Ambient Temperature]

## POWER SUPPLIES

A common VCC power supply should be used for all pins requiring DC power. All supply pins should be bypassed with external capacitors to minimize noise and fast transients. Supply noise can degrade noise figure and fast transients can trigger ESD clamps and cause them to fail. Supply voltage change or transients should have a slew rate smaller than  $1V/20\mu S$ . In addition, all control pins should remain at 0V (+/-0.3V) while the supply voltage ramps or while it returns to zero.

## CONTROL PIN INTERFACE

If control signal integrity is a concern and clean signals cannot be guaranteed due to overshoot, undershoot, ringing, etc., provisions for an R-C circuit at the input of each control pin is recommended. This applies to pins 11, 12, and 19 as shown below.

## GAIN SELECT

F1192 provides a gain select feature requiring 2 pins for logic control. The following table summarizes the required pin logic to achieve the desired gain setting. Internal pull down resistors are included requiring no control to set both channels to maximum gain.

Desired Power Gain (dB)	Gain Select1 (Pin 11) #	Gain Select2 (Pin 12)
11	0	0
8	0	1
5	1	0
2	1	1

## DEFAULT START-UP

Upon start-up, the device gain will be whatever the gain select pins are set for as defined in the table above.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
