**OUTLINE**

The RQ5RW Series are voltage regulator ICs with high accuracy output voltage and ultra-low supply current developed by CMOS process. Each of these ICs consists of a voltage reference unit, an error amplifier, resistors for setting output voltage and a current limit circuit.

The output voltage of these ICs is fixed with high accuracy.

Even if  $V_{OUT}$  is shorted to GND, the included current limit circuit protects the ICs from the destruction.

Furthermore, these ICs have a chip enable function, so that the supply current on standby can be minimized.

Since the package for these ICs are SC-82AB (Super Mini-mold) package, high density mounting of the ICs on boards is possible.

**FEATURES**

- Ultra-Low Supply Current.....TYP. 1.5 $\mu$ A
- Standby Current .....TYP. 0.1 $\mu$ A
- Dropout Voltage.....TYP. 40mV ( $I_{OUT}=1mA$ , RQ5RW30A/B)
- Low Temperature-Drift Coefficient of  
Output Voltage.....TYP.  $\pm 100ppm/^{\circ}C$
- Excellent Line Regulation.....TYP. 0.05%/V
- High Accuracy Output Voltage..... $\pm 2.0\%$
- Ultra-Small Package .....SC-82AB (Super Mini-mold)
- Built-in Current Limit Circuits

**APPLICATIONS**

- Power source for battery-powered equipment.
- Power source for cameras, VCRs, camcorders, hand-held audio instruments and hand-held communication equipment.
- Precision voltage references.

### ABSOLUTE MAXIMUM RATINGS

Absolute Maximum ratings are threshold limit values that must not be exceeded even for an instant under any conditions. Moreover, such values for any two items must not be reached simultaneously. Operation above these absolute maximum ratings may cause degradation or permanent damage to the device. These are stress ratings only and do not necessarily imply functional operation below these limits.

## OPERATION

In these ICs, Output Voltage V<sub>OUT</sub> is detected by Feed-back Registers R1, R2, and the detected Output Voltage is compared with a reference voltage by Error Amplifier, so that a constant voltage is output.

A current limit circuit working for Short Protect and a chip enable circuit are included.

## TYPICAL APPLICATION

In RQ5RW Series, a constant voltage can be obtained without using Capacitor C1 and C2. However, when the wire connected  $V_{IN}$  is long, use Capacitor C1. Output noise can be reduced by using Capacitor 2.

Insert Capacitors C1 and C2 with the capacitance of  $0.1\mu\text{F}$  to  $0.2\mu\text{F}$  between Input/Output Pins and GND Pin with minimum wiring.
