## Part Numbering System

### Typical Part Number

LEV200 A 4 N A A

### Series:

LEV200 = 500+ Amp, 12-900Vdc Contactor

### Contact Form:

A = Normally Open

H = Normally Open with Aux. Contacts. (Option "H" requires option "A" in Coil Wire Length and option "N" in Coil Terminal Connector.)

Note: Other auxiliary contact forms available. Consult factory.

### Coil Voltage:

4 = 12Vdc      5 = 24Vdc      6 = 48Vdc      K = 72Vdc  
8 = 96Vdc      L = 110Vdc      O = 115Vac      9 = 240Vac

Notes: Consult factory for detailed specifications and availability of coils not listed in "Coil Data" table above. In coil voltage codes, 115Vac is designated by the letter "O" rather than the numeral "0."

### Coil Wire Length:

A = 15.3 in (390 mm)      N = None (Requires option "A" in next step.)

### Coil Terminal Connector:

N = None, stripped wires (Requires option "A" in previous step.)

A = Studs, #10-32 Threaded (Electrical connection is made to the tab at the base of the stud.)

Note: Specify option A, stripped wires, for coil voltages > 96Vdc

### Mounting & Power Terminals:

A = Bottom Mount & Male 10mm x M8 Threaded Terminals

F = Side Mount & Male 10mm x M8 Threaded Terminals

Consult factory regarding other available mountings and power terminals.

NOTE: All part numbers are RoHS compliant (and always have been).

Estimated Make & Break Power Switching Ratings

- NOTES:  
1) For resistive loads with 300µH maximum inductance. Consult factory for inductive loads.  
2) Estimates based on extrapolated data. User is encouraged to confirm performance in application.  
3) End of life when dielectric strength between terminals falls below 50 megohms @ 500VDC.  
4) The maximum make current is 650A to avoid contact welding.
