# DS232A Dual RS-232 Transmitter/Receiver

## FEATURES

- Compatible with LT1181A and MAX232A
- High data rate - 250 kbits/sec under load
- 16-pin DIP or SOIC package
- 20-pin TSSOP package for height restricted applications
- Operate from single +5V power
- Meets all EIA-232E and V.28 specifications
- Uses small capacitors: 0.1  $\mu$ F
- Optional industrial temperature range available (-40°C to +85°C)

## ORDERING INFORMATION

DS232A	16-pin DIP
DS232A-N	16-pin DIP (Industrial)
DS232AR	16-pin SOIC (150-Mil)

DS232AE	20-pin TSSOP
DS232AE-N	20-pin TSSOP (Industrial)

## DESCRIPTION

The DS232A is a dual RS-232 driver/receiver pair that generates RS-232 voltage levels from a single +5-volt power supply. Additional  $\pm$ 12-volt supplies are not needed since the DS232A uses on-board charge pumps to convert the +5-volt supply to  $\pm$ 10 volts. The DS232A is fully compliant with EIA RS-232E and V.28/V.24 standards. The DS232A contains two drivers and two receivers. Driver slew rates and data rates are guaranteed up to 250k bits/sec. The DS232A operates with only 0.1  $\mu$ F charge pump capacitors.

## OPERATION

The diagram in Figure 1 shows the main elements of the DS232A. The following paragraphs describe the function of each pin.

## PIN DESCRIPTIONS

**V<sub>CC</sub>, GND:** DC power is provided to the device on these pins. V<sub>CC</sub> is the +5-volt input.

**V+:** Positive supply output (RS-232). V+ requires an external storage charge capacitor of at least 0.1  $\mu$ F. A larger capacitor (up to 10  $\mu$ F) can be used to reduce supply ripple.

**V-:** Negative supply output (RS-232). V- requires an external storage capacitor of at least 0.1  $\mu$ F. A larger capacitor (up to 10  $\mu$ F) can be used to reduce supply ripple.

**T1<sub>IN</sub>, T2<sub>IN</sub>:** Standard TTL/CMOS inputs for the RS-232 drivers. The inputs of unused drivers can be left unconnected since each input has a 400 k $\Omega$  pullup resistor.

**T1<sub>OUT</sub>, T2<sub>OUT</sub>:** Driver outputs at RS-232 levels. Driver output swing meets RS-232 levels for loads up to 3 k $\Omega$ . These driver outputs provide current necessary to meet RS-232 levels for loads up to 2500 pF.

---

**R1 IN, R2 IN:** Receiver inputs. These inputs accept RS-232 level signals ( $\pm 25$  volts) into a protected  $5\text{ k}\Omega$  terminating resistor. Each receiver provides  $0.5\text{V}$  hysteresis (typical) for noise immunity.

**R1 OUT, R2 OUT:** Receiver outputs at TTL/CMOS levels.

**C1+, C1-, C2+, C2-:** Charge pump capacitor inputs. These pins require two external capacitors ( $0.1\text{ }\mu\text{F}$  minimum,  $10\text{ }\mu\text{F}$  maximum and should be the same size as C3 and C4). Capacitor 1 is connected between C1+ and C1-. Capacitor 2 is connected between C2+ and C2-. Capacitor C1 can be omitted if +12 volts is connected directly to V+. Likewise, C2 can be omitted if -12V is connected directly to V-.

## DUAL CHARGE PUMP CONVERTERS

The DS232A has a two-stage on-board charge pump circuit that is used to generate  $\pm 10$  volts from a single +5-volt supply. In the first stage, capacitor C1 doubles the +5V supply to +10 volts which is then stored on capacitor C3. The second stage uses capacitor C2 to invert the +10V potential to -10V. This charge is then stored on capacitor C4. The  $\pm 10$ -volt supplies allow the DS232A to provide the necessary output levels for RS-232 communication. The DS232A will operate with charge pump capacitors as low as  $0.1\text{ }\mu\text{F}$ . Larger capacitors (up to  $10\text{ }\mu\text{F}$ ) can be used to reduce supply ripple.

## RS-232 DRIVERS

The two RS-232 drivers are powered by the internal  $\pm 10$ -volt supplies generated by the on-board charge pump. The driver inputs are both TTL and CMOS compatible. Each input has an internal  $400\text{ k}\Omega$  pullup resistor so that unused transmitter inputs can be left unconnected. The open circuit output voltage swing is from  $(V+ - 0.6)$  to  $V-$  volts. Worst case conditions for EIA-232E/V.28 of  $\pm 5$ -volt driving a  $3\text{ k}\Omega$  load and  $2500\text{ pF}$  are met at maximum operating temperature and  $V_{CC}$  equal to 4.5 volts. Typical voltage swings of  $\pm 8$  volts occur when loaded with a nominal  $5\text{ k}\Omega$  RS-232 receiver. As required by EIA-232E and V.28 specifications, the slew rate at the output is limited to less than  $30\text{ volts}/\mu\text{s}$ . Typical slew rates are  $20\text{ volts}/\mu\text{s}$  unloaded and  $12\text{ volts}/\mu\text{s}$  with  $3\text{ k}\Omega$  and  $2500\text{ pF}$  load. These slew rates allow for bit rates of over  $250\text{k bits/s}$ . Driver outputs maintain high impedance when power is off.

## RS-232 RECEIVERS

The two receivers conform fully to the RS-232E specifications. The input impedance is typically  $5\text{ k}\Omega$  and can withstand up to  $\pm 25$  volts with or without  $V_{CC}$  applied. The input switching thresholds are within the  $\pm 3$ -volt limit of RS-232E specification with an input threshold low of 0.8 volts and an input threshold high of 2.4 volts. The receivers have  $0.5\text{V}$  of hysteresis (typical) to improve noise rejection. The TTL/CMOS compatible outputs of the receivers will be low whenever the RS-232 input is greater than 2.4 volts. The receiver output will be high when the input is floating or driven between +0.8 volts and -25 volts.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

#### Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помошь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помошь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
