## Fixed/Adjustable Current-Limiting Power-Distribution Switches

The NCP380 is a high side power-distribution switch designed for applications where heavy capacitive loads and short-circuits are likely to be encountered. The device includes an integrated 55 mΩ (DFN package), P-channel MOSFET. The device limits the output current to a desired level by switching into a constant-current regulation mode when the output load exceeds the current-limit threshold or a short is present. The current-limit threshold is either user adjustable between 100 mA and 2.1 A via an external resistor or internally fixed. The power-switch rise and fall times are controlled to minimize current ringing during switching.

An internal reverse-voltage detection comparator disables the power-switch if the output voltage is higher than the input voltage to protect devices on the input side of the switch.

The  $\overline{\text{FLAG}}$  logic output asserts low during over current, reverse-voltage or over temperature conditions. The switch is controlled by a logic enable input active high or low.

### Features

- 2.5 V – 5.5 V Operating Range
- 70 mΩ High-side MOSFET
- Current Limit:
  - ◆ User adjustable from 100 mA to 2.1 A
  - ◆ Fixed 500 mA, 1 A, 1.5 A, 2 A and 2.1 A
- Under Voltage Lock-out (UVLO)
- Built-in Soft-start
- Thermal Protection
- Soft Turn-off
- Reverse Voltage Protection
- Junction Temperature Range:  $-40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$
- Enable Active High or Low ( $\overline{\text{EN}}$  or  $\overline{\text{EN}}$ )
- Compliance to IEC61000-4-2 (Level 4)
  - ◆ 8.0 kV (Contact)
  - ◆ 15 kV (Air)
- UL Listed – File No. E343275
- NCV Prefix for Automotive and Other Applications Requiring Unique Site and Control Change Requirements; AEC-Q100 Qualified and PPAP Capable
- These are Pb-Free Devices

### Typical Applications

- Laptops
- USB Ports/Hubs
- TVs

### ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 20 of this data sheet.

# NCP380, NCV380

\*For Adjustable Version Only.

**Figure 1. Typical Application Circuit**

\*For adjustable version only, otherwise not connected.

**Figure 2. Pin Connections**

**Table 1. PIN FUNCTION DESCRIPTION**

Pin Name	Type	Description
EN	INPUT	Enable input, logic low/high (i.e. $\overline{EN}$ or EN) turns on power switch
GND	POWER	Ground connection;
IN	POWER	Power-switch input voltage; connect a 1 $\mu$ F or greater ceramic capacitor from IN to GND as close as possible to the IC.
FLAG	OUTPUT	Active-low open-drain output, asserted during overcurrent, overtemperature or reverse-voltage conditions. Connect a 10 k $\Omega$ or greater resistor pull-up, otherwise leave unconnected.
OUT	OUTPUT	Power-switch output; connect a 1 $\mu$ F ceramic capacitor from OUT to GND as close as possible to the IC is recommended. A 1 $\mu$ F or greater ceramic capacitor from OUT to GND must be connected if the USB requirement (i.e. 120 $\mu$ F capacitor minimum) is not met.
ILIM*	INPUT	External resistor used to set current-limit threshold; recommended 5 k $\Omega$ < R <sub>ILIM</sub> < 250 k $\Omega$ .
PAD1**	THERMAL	Exposed Thermal Pad: Must be soldered to PCB Ground plane

\*(For adjustable version only, otherwise not connected.

\*\*For DFN version only.

FUNCTIONAL DESCRIPTION

Overview

The NCP380 is a high side P channel MOSFET power distribution switch designed to protect the input supply voltage in case of heavy capacitive loads, short circuit or over current. In addition, the high side MOSFET is turned off during under voltage, thermal shutdown or reverse voltage condition. Adjustable version allows the user to program the current limit threshold using an external resistor. Thanks to the soft start circuitry, NCP380 is able to limit large current and voltage surges.

Overcurrent Protection

NCP380 switches into a constant current regulation mode when the output current is above the  $I_{OCP}$  threshold. Depending on the load, the output voltage is decreased accordingly.

- In case of hot plug with heavy capacitive load, the output voltage is brought down to the capacitor voltage. The NCP380 will limit the current to the  $I_{OCP}$  threshold value until the charge of the capacitor is completed.

Figure 22. Heavy capacitive load

- In case of overload, the current is limited to the  $I_{OCP}$  value and the voltage value is reduced according to the load by the following relation:

$$V_{OUT} = R_{LOAD} \times I_{OCP} \quad (eq. 1)$$

Figure 23. Overload

- In case of short circuit or huge load, the current is limited to the  $I_{OCP}$  value within  $T_{DET}$  time until the short condition is removed. If the output remains shorted or tied to a very low voltage, the junction temperature of the chip exceeds  $T_{SDOCP}$  value and the device enters in thermal shutdown (MOSFET is turned-off).

Figure 24. Short circuit

Then, the device enters in timer regulation mode, described in 2 phases:

- Off-phase: Power MOSFET is off during  $T_{OCP}$  to allow the die temperature to drop.
- On-phase: regulation current mode during  $T_{REG}$ . The current is regulated to the  $I_{OCP}$  level.

The timer regulation mode allows the device to handle high thermal dissipation (in case of short circuit for example) within temperature operating condition.

NCP380 stays in on-phase/off-phase loop until the over current condition is removed or enable pin is toggled.

**Remark:** Other regulation modes can be available for different applications. Please contact our ON Semiconductor representative for availability.

FLAG Indicator

The  $\overline{FLAG}$  pin is an open-drain MOSFET asserted low during over current, reverse-voltage or over temperature conditions. When an over current or a reverse voltage fault is detected on the power path,  $\overline{FLAG}$  pin is asserted low at the end of the associate deglitch time (see electrical characteristics). Thanks to this feature, the  $\overline{FLAG}$  pin is not tied low during the charge of a heavy capacitive load or a voltage transient on output. Deglitch time is  $T_{FOCP}$  for over current fault and  $T_{REV}$  for reverse voltage. The  $\overline{FLAG}$  pin remains low until the fault is removed. Then, the  $\overline{FLAG}$  pin goes high at the end of  $T_{FGL}$ .

Undervoltage Lock-out

Thanks to a built-in under voltage lockout (UVLO) circuitry, the output remains disconnected from input until  $V_{IN}$  voltage is below  $V_{UVLO}$ . When  $V_{IN}$  voltage is above  $V_{UVLO}$ , the system try to reconnect the output after a rearming time.  $T_{RUVLO}$ . This circuit has a  $V_{HYST}$  hysteresis witch provides noise immunity to transient.

Thermal Sense

Thermal shutdown turns off the power MOSFET if the die temperature exceeds  $T_{SD}$ . A Hysteresis prevents the part from turning on until the die temperature cools at  $T_{RSD}$ .

## Reverse Voltage Protection

When the output voltage exceeds the input voltage by  $V_{REV}$  voltage during  $T_{REV}$ , the reverse voltage circuitry disconnects the output in order to protect the power supply. The same time  $T_{REV}$  is needed to turn on again the power MOS plus a rearming time  $T_{RREV}$ .

## Enable Input

Enable pin must be driven by a logic signal (CMOS or TTL compatible) or connected to the GND or VIN. A logic low on  $\overline{EN}$  or high on EN turns-on the device. A logic high on  $\overline{EN}$  or low on EN turns off device and reduces the current consumption down to  $I_{INOFF}$ .

## Blocking Control

The blocking control circuitry switches the bulk of the power MOS. When the part is off, the body diode limits the leakage current  $I_{REV}$  from OUT to IN. In this mode, anode of the body diode is connected to IN pin and cathode is connected to OUT pin. In operating condition, anode of the body diode is connected to OUT pin and cathode is connected to IN pin preventing the discharge of the power supply.

## APPLICATION INFORMATION

### Power Dissipation

The junction temperature of the device depends on different contributing factors such as board layout, ambient temperature, device environment, etc... Yet, the main contributor in terms of junction temperature is the power dissipation of the power MOSFET. Assuming this, the power dissipation and the junction temperature in normal mode can be calculated with the following equations:

$$P_D = R_{DS(on)} \times (I_{OUT})^2 \quad (eq. 2)$$

Where:

$P_D$  = Power dissipation (W)  
 $R_{DS(on)}$  = Power MOSFET on resistance ( $\Omega$ )  
 $I_{OUT}$  = Output current (A)

$$T_J = P_D \times R_{\theta JA} + T_A \quad (eq. 3)$$

Where:

$T_J$  = Junction temperature ( $^{\circ}C$ )  
 $R_{\theta JA}$  = Package thermal resistance ( $^{\circ}C/W$ )  
 $T_A$  = Ambient temperature ( $^{\circ}C$ )

Power dissipation in regulation mode can be calculated by taking into account the drop  $V_{IN}-V_{OUT}$  link to the load by the following relation:

$$P_D = (V_{IN} - R_{LOAD} \times I_{OCP}) \times I_{OCP} \quad (eq. 4)$$

Where:

$P_D$  = Power dissipation (W)  
 $V_{IN}$  = Input Voltage (V)  
 $R_{LOAD}$  = Load Resistance ( $\Omega$ )  
 $I_{OCP}$  = Output regulated current (A)

### Adjustable Current-Limit Programming (for adjustable version only)

The NCP380xMUAJAA and NCP380xSNAJAA, respectively  $\mu$ DFN and TSOP6 packages, are proposed to have current limit flexibility for end Customer. Indeed, Ilim pin is available to connect pull down resistor to ground, which participate to the current threshold adjustment. It's strongly recommended to use 0.1 or 1% resistor tolerance to keep the over current accuracy.

For this resistance selection, Customer should define first of all, the USB current to sustain, without the device enters in the protection sequence. Main rule is to select this pull down resistor in order to make sure min current limit is above the USB current to provide continuously to the upstream accessory.

Following, the main table selection contains the USB current port for the accessory, the standard resistor selection and typical/max over current threshold.

# NCP380, NCV380

**Table 5. RESISTOR SELECTION FOR ADJUSTABLE CURRENT LIMIT VERSION**

Min Current Limit Value (A)	Theoric Resistor Value (kΩ)	Selected Resistor Value (kΩ) 1% or 0.1%	Typical OCP Target Value (A)	Maximum Current Value (A)
0.5	44.2	44.2	0.59	0.67
0.6	37.5	37.4	0.71	0.81
0.7	32.2	31.6	0.825	0.95
0.8	27.7	27.4	0.94	1.08
0.9	24.0	23.7	1.06	1.22
1.0	21.0	21	1.18	1.35
1.1	18.5	18.2	1.3	1.49
1.2	16.6	16.5	1.41	1.62
1.3	14.6	14.3	1.53	1.76
1.4	13.0	13	1.65	1.9
1.5	11.4	11.3	1.78	2.05
1.6	10.4	10.2	1.88	2.17
1.7	9.2	9.09	2.01	2.31
1.8	8.3	8.25	2.12	2.438
1.9	7.4	7.32	2.23	2.56
2.0	6.5	6.49	2.36	2.7
2.1	5.6	5.49	2.48	2.85

The “Min current limit Value” column, represents the DC current to provide to the accessory without over current activation.

Second column is the theoretical resistor value obtained with following formula to achieve typical current target:

$$R_{lim} = -5.2959 \times ILIM^5 + 45.256 \times ILIM^4 - 155.25 \times ILIM^3 + 274.39 \times ILIM^2 - 267.6 \times ILIM + 134.21 \quad (eq. 5)$$

**R<sub>LIM</sub> Versus OCP Average**

**Figure 25. R<sub>LIM</sub> Curve vs. Current Limit**

## NCP380, NCV380

When the resistor is choosing to fit with the Customer application, the limits of the over current threshold can be calculated with the following formula:

$$IOCP_{min} = 1.6915129 - 0.0330328 \times R_{lim} + 0.0011207(R_{lim} - 22.375)^2 - 0.0000451 \times (R_{lim} - 22.375)^3 + 0.0000009 \times (R_{lim} - 22.375)^4 \quad (\text{eq. 6})$$

$$IOCP_{max} = 2.2885175 - 0.0446914 \times R_{lim} + 0.0015163(R_{lim} - 22.375)^2 - 0.000061 \times (R_{lim} - 22.375)^3 + 0.0000012 \times (R_{lim} - 22.375)^4 \quad (\text{eq. 7})$$

$$IOCP_{typ} = 1.9900152 - 0.0388621 \times R_{lim} + 0.0013185(R_{lim} - 22.375)^2 - 0.0000531 \times (R_{lim} - 22.375)^3 + 0.0000011 \times (R_{lim} - 22.375)^4 \quad (\text{eq. 8})$$

The minimum, typical and maximum current curves are described in the following graph:

**Figure 26. Current Threshold vs. Rlim Resistor**

That is recommended to respect 6 kΩ–47 kΩ resistor range for two reasons.

For the low resistor values, the current limit is pushed up to high current level. Due to internal power dissipation capability, a maximum of 2.4 A typical can be set for the μDFN package if thermal consideration are respected. For the TSOP6 version 1.2 A is the maximum recommended value because the part could enter in thermal shutdown mode before constant current regulation mode.

In the other side, if we want to keep 15% of accuracy, high resistor values can be used up to 50 kΩ. With higher value, the current threshold is lower than 500 mA, so in this case degraded accuracy can be observed.

### PCB Recommendations

The NCP380 integrates a PMOS FET rated up to 2 A, and the PCB design rules must be respected to properly evacuate the heat out of the silicon. The UDFN6 PAD1 must be connected to ground plane to increase the heat transfer if necessary. This pad must be connected to ground plane. By increasing PCB area, the R<sub>θJA</sub> of the package can be decreased, allowing higher power dissipation.

# NCP380, NCV380

\*NCV Prefix for Automotive and Other Applications Requiring Unique Site and Control Change Requirements.

# NCP380, NCV380

## PACKAGE DIMENSIONS

UDFN6 2x2, 0.65P  
CASE 517AB  
ISSUE C

\*For additional information on our Pb-Free strategy and soldering details, please download the ON Semiconductor Soldering and Mounting Techniques Reference Manual, SOLDERRM/D.

# NCP380, NCV380

## PACKAGE DIMENSIONS

### TSOP-5 CASE 483-02 ISSUE H

NOTES:

1. DIMENSIONING AND TOLERANCING PER ASME Y14.5M, 1994.
2. CONTROLLING DIMENSION: MILLIMETERS.
3. MAXIMUM LEAD THICKNESS INCLUDES LEAD FINISH THICKNESS. MINIMUM LEAD THICKNESS IS THE MINIMUM THICKNESS OF BASE MATERIAL.
4. DIMENSIONS A AND B DO NOT INCLUDE MOLD FLASH, PROTRUSIONS, OR GATE BURRS.
5. OPTIONAL CONSTRUCTION: AN ADDITIONAL TRIMMED LEAD IS ALLOWED IN THIS LOCATION. TRIMMED LEAD NOT TO EXTEND MORE THAN 0.2 FROM BODY.

DIM	MILLIMETERS	
	MIN	MAX
A	3.00 BSC	
B	1.50 BSC	
C	0.90	1.10
D	0.25	0.50
G	0.95 BSC	
H	0.01	0.10
J	0.10	0.26
K	0.20	0.60
L	1.25	1.55
M	0°	10°
S	2.50	3.00

### SOLDERING FOOTPRINT\*

## PACKAGE DIMENSIONS

### TSOP-6 CASE 318G-02 ISSUE V

**NOTES:**

1. DIMENSIONING AND TOLERANCING PER ASME Y14.5M, 1994.
2. CONTROLLING DIMENSION: MILLIMETERS.
3. MAXIMUM LEAD THICKNESS INCLUDES LEAD FINISH. MINIMUM LEAD THICKNESS IS THE MINIMUM THICKNESS OF BASE MATERIAL.
4. DIMENSIONS D AND E1 DO NOT INCLUDE MOLD FLASH, PROTRUSIONS, OR GATE BURRS. MOLD FLASH, PROTRUSIONS, OR GATE BURRS SHALL NOT EXCEED 0.15 PER SIDE. DIMENSIONS D AND E1 ARE DETERMINED AT DATUM H.
5. PIN ONE INDICATOR MUST BE LOCATED IN THE INDICATED ZONE.

DIM	MILLIMETERS		
	MIN	NOM	MAX
A	0.90	1.00	1.10
A1	0.01	0.06	0.10
b	0.25	0.38	0.50
c	0.10	0.18	0.26
D	2.90	3.00	3.10
E	2.50	2.75	3.00
E1	1.30	1.50	1.70
e	0.85	0.95	1.05
L	0.20	0.40	0.60
L2	0.25 BSC		
M	0°	-	10°

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
