The information given in this document shall in no event be regarded as a guarantee of conditions or characteristics. With respect to any examples or hints given herein, any typical values stated herein and/or any information regarding the application of the device, Infineon Technologies hereby disclaims any and all warranties and liabilities of any kind, including without limitation, warranties of non-infringement of intellectual property rights of any third party.

Information

For further information on technology, delivery terms and conditions and prices, please contact the nearest Infineon Technologies Office (www.infineon.com).

Warnings

Due to technical requirements, components may contain dangerous substances. For information on the types in question, please contact the nearest Infineon Technologies Office.

Infineon Technologies components may be used in life-support devices or systems only with the express written approval of Infineon Technologies, if a failure of such components can reasonably be expected to cause the failure of that life-support device or system or to affect the safety or effectiveness of that device or system. Life support devices or systems are intended to be implanted in the human body or to support and/or maintain and sustain and/or protect human life. If they fail, it is reasonable to assume that the health of the user or other persons may be endangered.

High Precision Hall-Effect Switch

**TLE4906K
TLE4906L**

1 Product Description

1.1 Overview

The TLE4906 is a high precision Hall effect switch with highly accurate switching thresholds for operating temperatures up to 150°C.

1.2 Features

- 2.7V to 24V supply voltage
- Operation from unregulated power supply
- High sensitivity and high stability of the magnetic switching points
- High resistance to mechanical stress by Active Error Compensation
- Reverse battery protection (-18V)
- Superior temperature stability
- Peak temperatures up to 195°C without damage
- Low jitter (typ. 1µs)
- High ESD performance ($\pm 6\text{kV}$ HBM)
- Digital output signal
- SMD package SC59 (SOT23 compatible) - (TLE4906K)
- Leaded package PG-SSO-3-2 - (TLE4906L)

1.3 Target Applications

Target applications for TLE4906 are all automotive applications which require a high precision Hall switch for position sensing with a operating temperature range from -40°C to +150°C.

Product Name	Product Type	Ordering Code	Package
Hall Effect Switch	TLE4906K	SP000475028	SC59
Hall Effect Switch	TLE4906L	SP000012949	PG-SSO-3-2

2 Functional Description

2.1 General

The TLE4906K and the TLE4906L are integrated circuit Hall-effect sensors designed specifically for highly accurate applications.

Precise magnetic switching points and high temperature stability are achieved by active compensation circuits and chopper techniques on chip.

2.2 Pin Configuration (top view)

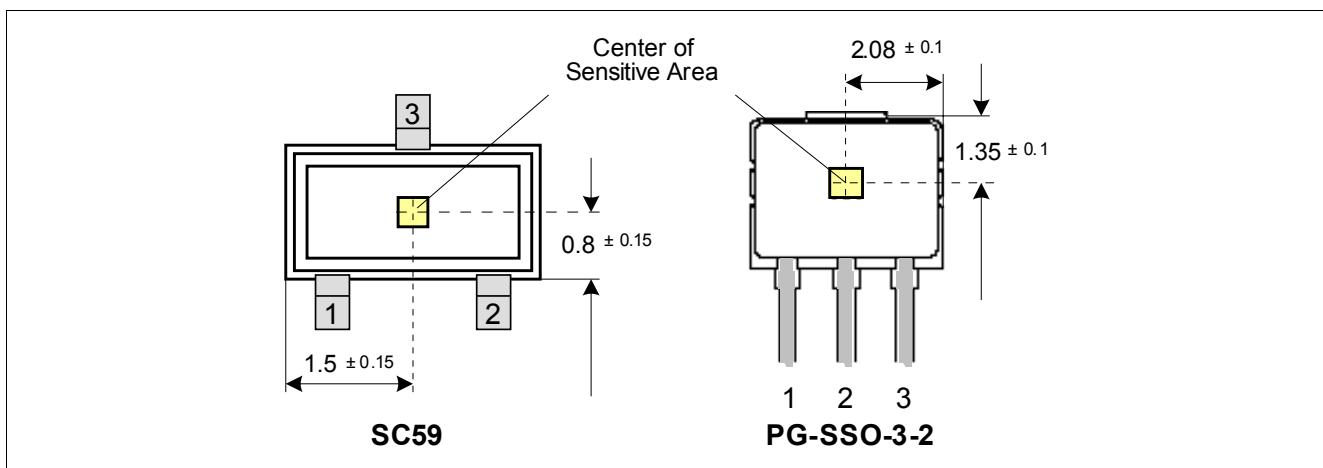

Figure 1 Pin Configuration and Center of Sensitive Area

2.3 Pin Description

Table 1 Pin Description SC59

Pin No.	Symbol	Function	Comment
1	V_S	Supply voltage	
2	Q	Output	
3	GND	Ground	

Table 2 Pin Description PG-SSO-3-2

Pin No.	Symbol	Function	Comment
1	V_S	Supply voltage	
2	GND	Ground	
3	Q	Output	

2.4 Block Diagram

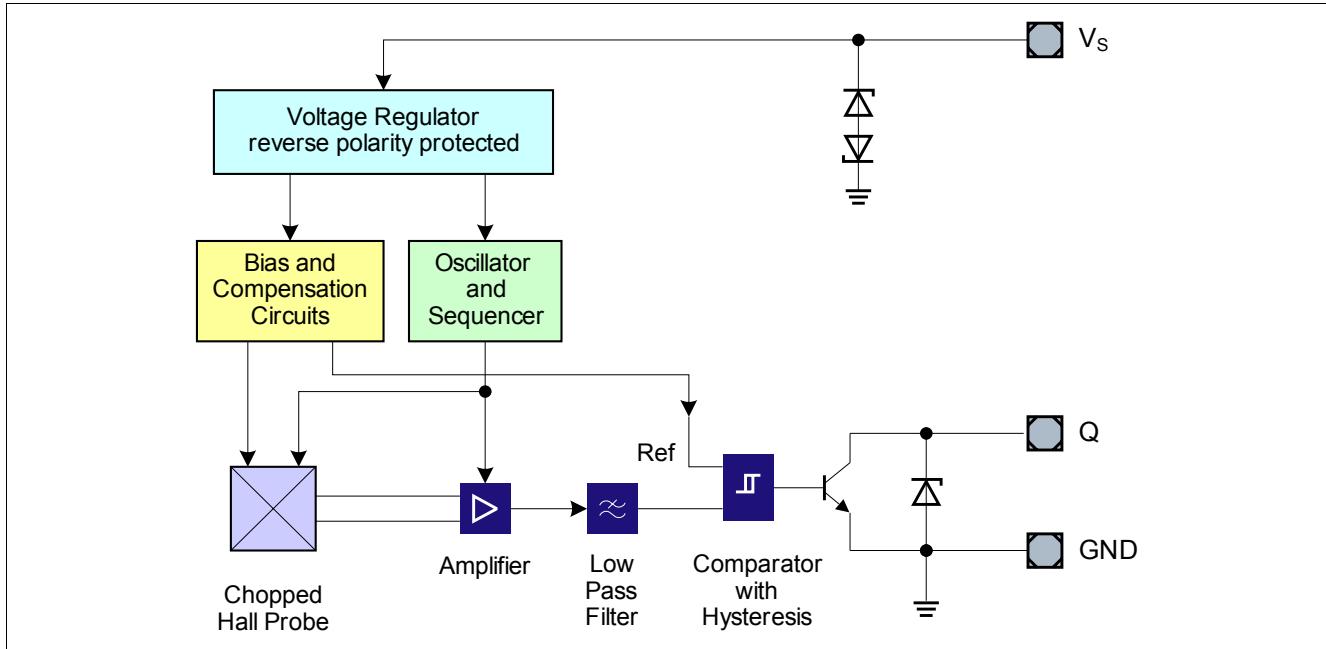

Figure 2 Functional Block Diagram

2.5 Functional Block Description

The chopped Hall IC Switch comprises a Hall probe, bias generator, compensation circuits, oscillator and output transistor.

The bias generator provides currents for the Hall probe and the active circuits. Compensation circuits stabilize the temperature behavior and reduce technology variations.

The Active Error Compensation rejects offsets in signal stages and the influence of mechanical stress to the Hall probe caused by molding and soldering processes and other thermal stresses in the package.

This chopper technique together with the threshold generator and the comparator ensure high accurate magnetic switching points.

3 Specification

3.1 Absolute Maximum Ratings

Table 3 Absolute Maximum Rating Parameters
 $T_j = -40^\circ\text{C}$ to 150°C

Parameter	Symbol	Limit Values		Unit	Note / Test Condition
		Min.	Max.		
Supply voltage	V_S	-18	18	V	for 1h, $R_S \geq 200\Omega$ for 5min, $R_S \geq 200\Omega$
		-18	24		
		-18	26		
Supply current through protection device	I_S	-50	50	mA	
Output voltage	V_Q	-0.7	18	V	for 5min @ $1.2\text{k}\Omega$ pull up
		-0.7	26		
Continuous output current	I_Q	-50	50	mA	
Junction temperature	T_j	–	155	°C	for 2000h (not additive) for 1000h (not additive) for 168h (not additive) for 3 x 1h (additive)
		–	165		
		–	175		
		–	195		
Storage temperature	T_S	-40	150	°C	
Magnetic flux density	B	–	unlimited	mT	

Note: Stresses above the max. values listed here may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Maximum ratings are absolute ratings; exceeding only one of these values may cause irreversible damage to the integrated circuit.

Table 4 ESD Protection¹⁾

Parameter	Symbol	Limit Values		Unit	Note / Test Condition
		Min.	Max.		
ESD Voltage	V_{ESD}		±6	kV	HBM, $R = 1.5\text{k}\Omega$, $C = 100\text{pF}$ $T_A = 25^\circ\text{C}$

1) Human Body Model (HBM) tests according to: EOS/ESD Association Standard S5.1-1993 and Mil. Std. 883D method 3015.7

3.2 Operating Range

The following operating conditions must not be exceeded in order to ensure correct operation of the TLE4906K / TLE4906L.

All parameters specified in the following sections refer to these operating conditions unless otherwise mentioned.

Table 5 Operating Conditions Parameters

Parameter	Symbol	Values			Unit	Note / Test Condition
		Min.	Typ.	Max.		
Supply voltage	V_S	2.7		18	V	
Output voltage	V_Q	-0.7		18	V	
Junction temperature	T_j	-40		150	°C	
Output current	I_Q	0		20	mA	

3.3 Electrical and Magnetic Characteristics

Product characteristics involve the spread of values guaranteed within the specified voltage and ambient temperature range. Typical characteristics are the median of the production.

Table 6 General Electrical Characteristics¹⁾

Parameter	Symbol	Values			Unit	Note / Test Condition
		Min.	Typ.	Max.		
Supply current	I _S	2	4	6	mA	V _S = 2.7V ... 18V
Reverse current	I _{SR}	0	0.2	1	mA	V _S = -18V
Output saturation voltage	V _{QSAT}	-	0.3	0.6	V	I _Q = 20mA
Output leakage current	I _{QLEAK}	-	0.05	10	µA	for V _Q = 18V
Output fall time	t _f	-	0.02	1	µs	R _L = 1.2kΩ; C _L = 50pF see Figure 3
Output rise time	t _r	-	0.4	1	µs	
Chopper frequency	f _{osc}	-	320	-	kHz	
Switching frequency	f _{SW}	0	-	15 ²⁾	kHz	
Delay time ³⁾	t _d	-	13	-	µs	
Output jitter ⁴⁾	t _{QJ}	-	1	-	µs _{RMS}	typical value for square wave signal with 1kHz
Power-on time ⁵⁾	t _{PON}	-	13	-	µs	V _S ≥ 2.7V
Thermal resistance ⁶⁾	R _{thJA}	-	100	-	K/W	SC59
		-	-	190		PG-SSO-3-2

1) over operating range, unless otherwise specified. Typical values correspond to V_S = 12V and T_A = 25°C

2) To operate the sensor at the max. switching frequency, the value of the magnetic signal amplitude must be 1.4 times higher than for static fields. This is due to the -3dB corner frequency of the low pass filter in the signal path.

3) Systematic delay between magnetic threshold reached and output switching.

4) Jitter is the unpredictable deviation of the output switching delay.

5) Time from applying V_S ≥ 2.7V to the sensor until the output state is valid.

6) Thermal resistance from junction to ambient.

Calculation of the ambient temperature (SC59 example)

e.g. for V_S = 12.0V, I_{Styp} = 4mA, V_{QSATtyp} = 0.3V and I_Q = 20mA

Power dissipation P_{DIS} = 54.0mW

In T_A = T_j - (R_{thJA} × P_{DIS}) = 175°C - (100K/W × 0.054W)

Resulting max. ambient temperature: T_A = 169.6°C

Table 7 Magnetic Characteristics¹⁾

Parameter	Symbol	T _j [°C]	Values			Unit	Note / Test Condition
			Min.	Typ.	Max.		
Operating point	B _{OP}	-40	6.7	10.3	13.9	mT	
		25	6.5	10.0	13.5		
		150	6.2	9.5	12.9		
Release point	B _{RP}	-40	5.2	8.7	12.3	mT	
		25	5.0	8.5	12.0		
		150	4.7	8.1	11.4		
Hysteresis	B _{HYS}	-40	-	-	-	mT	
		25	0.7	1.5	3.0		
		150	-	-	-		
Temperature compensation of magnetic thresholds	T _C		-	-350	-	ppm/°C	
Repeatability of magnetic thresholds ²⁾	B _{REP}		-	20	-	µT _{RMS}	typ. value for ΔB/Δt > 12mT/ms

1) over operating range, unless otherwise specified. Typical values correspond to V_S = 12V and T_A = 25°C.

2) B_{REP} is equivalent to the noise constant

Note: Typical characteristics specify mean values expected over the production spread

Field Direction Definition

Positive magnetic fields are defined with the south pole of the magnet to the branded side of package.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помошь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помошь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
