

General Description

The AL5809Q is a two terminal constant current linear LED driver and it provides a cost-effective solution. It offers an excellent temperature stability 20 ppm/°C and the current accuracy $\pm 5\%$ regulated over a wide voltage range. The AL5809Q simplifies the design for linear LED drivers allowing it to be designed as a high or low-side constant current regulator without any external components.

The AL5809Q turns on immediately and can swing from 2.5V up to 60V enabling it drive long LED chains. The floating ground, 60V Voltage rating between Input and Output pins designed to withstand the high peak voltage incurred in DC and offline applications.

The AL5809QE1-XXX (from 15 to 150 mA) is available in thermally robust POWERDI-123 package with different current options, please see ordering information section.

Key Features

- Low Minimum Operating Voltage (2.5V to 60V)
- -40°C to 125°C Temperature Range
- $\pm 5\%$ LED Current Accuracy
- PDI-123 package

Applications

- Constant LED Current Driver
- Isolated Offline LED Converters
- LED Signs
- Instrumentation Illumination

Specifications

Parameter	Value
Input Voltage	2.5V – 60V
LED Current Options	15 to 150mA
XYZ Dimension	0.69" x 0.77" x 0.1"
ROHS Compliance	Yes

Top-View EVM (AL5809QE1)

AL5809QE1 (PDI123)

Bottom-View EVM (AL5809QE1)

Connection Instructions

IN: Red Wire (LED connection)
 OUT: Black Wire

Board Layout

(a) Top View

(b) Bottom View

Note: This evaluation board provides design flexibility, multiple application circuits can be derived in both Low and High Side Current LED configurations. The footprint of U1 is compatible to both of **PDI-123** and **SOD-123** packages. In addition, it can be hooked up with use of PWM dimming.

Connection Setup and Power-up Procedures

Current LED String Procedure to Evaluation Board in Low side current LED configuration

1. Depends on the current options, the evaluation board is as low side current LED configuration.
2. Ensure that the DC source is switched OFF or disconnected.
3. Connect the power supply to Anode terminal of external LED string in the Low side LED configuration.
4. Connect the Cathode terminals of external LED string to IN terminal of the board and connect OUT wire to GND.
5. Ensure that the area around the board is clear and safe, and preferably that the board and LEDs are enclosed in a transparent safety cover.
6. Turn on the main switch. LED string should light up and the LED current should be regulated according to the current options of the device.

Bill of Material

#	Name	Quantity	Part number	Manufacturer	Description
1	U1	1	AL5809Q-xxxP1-7	Diodes Inc	Constant Current Regulator in PDI123

Ordering Information

XX : Identification code
Y : Year 0 to 9
W : Week : A to Z : 1 to 26 week;
 a to z : 27 to 52 week; z represents
 52 and 53 week
X : Internal code

Part Number	LED Current Option	Package	Identification Code
AL5809Q-15P1-7	15mA	PDI123	C1
AL5809Q-20P1-7	20mA	PDI123	C2
AL5809Q-25P1-7	25mA	PDI123	CA
AL5809Q-30P1-7	30mA	PDI123	C3
AL5809Q-40P1-7	40mA	PDI123	C4
AL5809Q-50P1-7	50mA	PDI123	C5
AL5809Q-60P1-7	60mA	PDI123	C6
AL5809Q-90P1-7	90mA	PDI123	C7

AL5809Q-100P1-7	100mA	PDI123	CB
AL5809Q-120P1-7	120mA	PDI123	C8
AL5809Q-150P1-7	150mA	PDI123	C9

Application Information

I) Current LED String Procedure in High side current LED configuration

1. The evaluation can also be configured as High side current LED configuration.
2. Ensure that the DC source is switched OFF or disconnected.
3. Connect the power supply to IN terminal wire on the board.
4. Connect the Anode and Cathode terminals of external LED string between OUT terminal and GND in the High side LED configuration.
5. Observe MAX 60V differential between IN and OUT terminals when applied Vcc > 60V.
6. **In the high side circuit configuration, extreme high voltage may be present. Please use caution and try not to touch any components on the board or input leads.**
7. Turn on the main switch. LED string should light up and the LED current should be regulated according to the current options of the device.

II) PWM Dimming

The AL5809Q can be used to provide LED current dimming driving the Out pin via the MOSFET switch to ground. The Out pin current is then effectively switched on and off causing the LED current to turn on and off

(a) PWM Dimming by External MOSFET

(b) PWM Dimming by Power Supply VIN ON/OFF

1. The evaluation board can be configured as Low side current LED configuration with use of PWM dimming.
2. Ensure that the DC source is switched OFF or disconnected.
3. Connect the power supply to Anode terminal of external LED string in the Low side LED configuration.
4. Connect the Cathode terminals of external LED string to IN terminal of the board and connect OUT wire to GND.
5. Insert external MOSFET across OUT terminal and GND of the board for PWM dimming control.
6. Ensure that the area around the board is clear and safe, and preferably that the board and LEDs are enclosed in a transparent safety cover.
7. Turn on the main switch. LED string should light up and the LED current should be regulated according to the current options of the device.

LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

A. Life support devices or systems are devices or systems which:

1. Are intended to implant into the body, or

2. Support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.

B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
