Description

The SKY13347-360LF is a pHEMT GaAs Single-Pole, Single-Throw (SPST) switch with a 50 Ω terminated output. The high linearity performance, low insertion loss, and high isolation achieved by the SKY13347-360LF make it an ideal choice for many cellular and wireless infrastructure applications.

The switch is manufactured in a compact, 2 x 2 mm, 8-pin Dual Flat No-Lead (DFN) package.

A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

DC supply voltage	V _S		6	V
Control voltage	V ₁		V _S	V
Input power	P _{IN}		+32	dBm
Storage temperature	T _{STG}	–40	+125	°C
Operating temperature	T _{OP}	–40	+85	°C

Note: Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

CAUTION: Although this device is designed to be as robust as possible, Electrostatic Discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.

Functional Description

Switching is controlled by a single control voltage on the V1 pin. Depending on the logic applied to the control pin, the RF1 and RF2 signals (pins 5 and 8, respectively) are connected to each other either by a low insertion loss path or a high isolation path.

Both RF ports of the switch require DC blocking capacitors. The value of either blocking capacitor determines the low frequency of operation.

Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY13347-360LF are provided in Table 2. Electrical specifications are provided in Table 3.

Typical performance characteristics of the SKY13347-360LF are illustrated in Figures 3 through 7.

The state of the SKY13347-360LF is determined by the logic provided in Table 4.

Evaluation Board Description

The SKY13347-360LF Evaluation Board is used to test the performance of the SKY13347-360LF SPDT Switch. An Evaluation Board schematic diagram is provided in Figure 8. An assembly drawing for the Evaluation Board is shown in Figure 9.

Package Dimensions

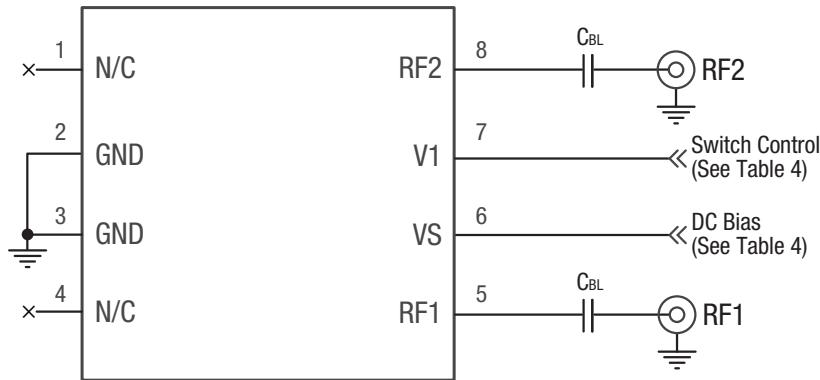

The PCB layout footprint for the SKY13347-360LF is provided in Figure 10. Typical case markings are shown in Figure 11. Package dimensions for the 6-pin MLPD are shown in Figure 12, and tape and reel dimensions are provided in Figure 13.

Package and Handling Information

Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY13347-360LF is rated to Moisture Sensitivity Level 1 (MSL1) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *Solder Reflow Information*, document number 200164.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.

*Note: C_{BL} = 47 pF for >500 MHz operation; 220 pF for operation down to 50 MHz.
Higher values recommended for lower frequency operation.
Exposed paddle must be grounded.*
