**Description**

The IRS25752 is a high-side, single-channel gate driver IC with 600V blocking and level-shifting capability. This allows for the gate driver to be connected directly to the gate of a high-side power MOSFET, while being controlled by the low-side, ground potential circuitry. The IRS25752 includes a wide  $V_{CC}$  supply range, UVLO protection, and excellent immunity to harsh dv/dt or  $-V_S$  switching environments. IR's HVIC technology allows for these functions and features to be realized in a 6-pin SOT-23 package.

## Absolute Maximum Ratings

Absolute maximum ratings indicate sustained limits beyond which damage to the device may occur. All voltage parameters are absolute voltages referenced to COM, all currents are defined positive into any pin. The thermal resistance and power dissipation ratings are measured under board mounted and still air conditions.
