

FEATURES

Innovative ceramic vertical mount package can be oriented
for pitch or roll rate response

Wide temperature range: -40°C to $+175^\circ\text{C}$

Long life: guaranteed 1000 hours at $T_A = 175^\circ\text{C}$

High vibration rejection over wide frequency

10,000 g powered shock survivability

Ratiometric to referenced supply

5 V single-supply operation

Self-test on digital command

Temperature sensor output

APPLICATIONS

Down hole measurements for geological exploration

Extreme high temperature industrial applications

Severe mechanical environments

GENERAL DESCRIPTION

The [ADXRS645](#) is a high performance angular rate sensor with excellent vibration immunity for use in high temperature environments. The [ADXRS645](#) is manufactured using the Analog Devices, Inc., patented high volume BiMOS surface-micromachining process with years of proven field reliability. An advanced, differential, quad sensor design provides superior acceleration and vibration rejection.

The output signal, RATEOUT, is a voltage proportional to the angular rate about the axis normal to the package lid. The measurement range is a minimum of $\pm 2000^\circ/\text{sec}$, and may be extended to $\pm 5000^\circ/\text{sec}$ with the addition of a single external resistor. The output is ratiometric with respect to a provided reference supply. Other external capacitors are required for operation.

A temperature output is provided for compensation techniques. Two digital self-test inputs electromechanically excite the sensor to test proper operation of both the sensor and the signal conditioning circuits. The [ADXRS645](#) is available in an 8 mm \times 9 mm \times 3 mm, 15-lead brazed lead tri in-line package.

SPECIFICATIONS

All minimum and maximum specifications are guaranteed. Typical specifications are not guaranteed. $T_A = 25^\circ\text{C}$, $V_S = AV_{CC} = V_{DD} = 5\text{ V}$, $V_{RATIO} = AV_{CC}$, angular rate = $0^\circ/\text{sec}$, bandwidth = 80 Hz ($C_{OUT} = 0.01\ \mu\text{F}$), and $I_{OUT} = 100\ \mu\text{A}$, unless otherwise noted.

Table 1.

Parameter	Test Conditions/Comments	Min	Typ	Max	Unit
SENSITIVITY ¹	Clockwise rotation is positive output				
Measurement Range ^{2,3}			±2000		°/sec
Initial	$T_A = 25^\circ\text{C}$		1		mV/°/sec
Temperature Drift	Uncompensated, -40°C to $+150^\circ\text{C}$ ⁴		±5		%
	Uncompensated, 150°C to 175°C		-35		%
Nonlinearity	Best fit straight line		0.1		% of FS
NULL ¹					
Initial	$T_A = 25^\circ\text{C}$	2.4	2.5	2.6	V
Temperature Drift	Uncompensated, -40°C to $+150^\circ\text{C}$ ⁴		±50		°/sec
	Uncompensated, 150°C to 175°C		±150		°/sec
Linear Acceleration Effect	Any axis		0.1		°/sec/g
Vibration Rectification	25 g rms, 50 Hz to 5 kHz		0.0006		°/sec/g ²
NOISE PERFORMANCE					
Rate Noise Density	$T_A \leq 25^\circ\text{C}$		0.25		°/sec/√Hz
Resolution Floor	$T_A = 25^\circ\text{C}$, 1 minute to 1 hour in-run		100		°/hr
	$T_A = 150^\circ\text{C}$, 1 minute to 1 hour in-run		150		°/hr
FREQUENCY RESPONSE					
Bandwidth ($\pm 3\text{ dB}$) ⁵	No external filter		2000		Hz
Sensor Resonant Frequency		15.5	17.5	20	kHz
SELF-TEST ¹					
ST1 RATEOUT Response	ST1 pin from Logic 0 to Logic 1		-1300		°/sec
ST2 RATEOUT Response	ST2 pin from Logic 0 to Logic 1		1300		°/sec
ST1 to ST2 Mismatch ⁶			±2		%
Logic 1 Input Voltage		3.3			V

Capacitive Load Drive				1000	pF
POWER SUPPLY					
Operating Voltage (V_S)		4.75	5.00	5.25	V
Quiescent Supply Current			3.5		mA
TEMPERATURE RANGE					
Specified Performance		-40		+175	°C
LIFESPAN					
Usable Life Expectancy	$T_A = 175^\circ\text{C}$	1000			Hours

¹ Parameter is linearly ratiometric with V_{RATIO} .

² Measurement range is the maximum range possible, including output swing range, initial offset, sensitivity, offset drift, and sensitivity drift at 5 V supplies.

³ Measurement range can be extended to as much as $\pm 5000^\circ/\text{s}$ by adding a single 120 kΩ resistor between the RATEOUT and SUMJ pins.

⁴ Maximum deviation from $+25^\circ\text{C}$ to -40°C or $+25^\circ\text{C}$ to $+150^\circ\text{C}$, see the Typical Performance Characteristics section for typical behavior over temperature.

⁵ Adjusted by the external capacitor, C_{OUT} . Reducing bandwidth below 0.01 Hz does not result in further noise improvement.

⁶ Self-test mismatch is described as $(ST2 + ST1)/((ST2 - ST1)/2)$.

⁷ Scale factor for a change in temperature from 25°C to 26°C . V_{TEMP} is ratiometric to V_{RATIO} .

⁸ Based on characterization.

ABSOLUTE MAXIMUM RATINGS

Table 2.

Parameter	Rating
Acceleration (Any Axis, 0.5 ms)	
Unpowered	10,000 g
Powered	10,000 g
V _{DD} , AV _{CC}	-0.3 V to +6.6 V
V _{RATIO}	AV _{CC}
ST1, ST2	AV _{CC}
Output Short-Circuit Duration (Any Pin to Common)	Indefinite
Operating Temperature Range	-55°C to +175°C
Storage Temperature Range	-65°C to +185°C

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

Drops onto hard surfaces can cause shocks of greater than 10,000 g and can exceed the absolute maximum rating of the device. Exercise care in handling to avoid damage.

RATE SENSITIVE AXIS

The ADXRS645 produces a positive output voltage for clockwise rotation about the axis normal to the package lid, that is, clockwise when looking at the package lid.

Figure 2. RATEOUT Signal Increases with Clockwise Rotation

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

THEORY OF OPERATION

The ADXRS645 operates on the principle of a resonator gyroscope. Two polysilicon sensing structures each contain a dither frame that is electrostatically driven to resonance, producing the necessary velocity element to produce a Coriolis force during angular rate. At two of the outer extremes of each frame, orthogonal to the dither motion, are movable fingers that are placed between fixed pickoff fingers to form a capacitive pickoff structure that senses Coriolis motion. The resulting signal is fed to a series of gain and demodulation stages that produce the electrical rate signal output. The dual sensor design rejects external g-forces and vibration. Fabricating the sensor with the signal conditioning electronics preserves signal integrity in noisy environments.

The electrostatic resonator requires 15 V for operation. Because only 5 V is typically available in most applications, a charge pump is included on chip. If an external 17 V to 22 V supply is available, the two capacitors on CP1 to CP4 can be omitted, and this supply can be connected to CP5 (Pin A2) through a 1 k Ω series resistor. Do not ground CP5 when power is applied to the ADXRS645. No damage occurs, but under certain conditions, the charge pump may fail to start up after the ground is removed without first removing power from the ADXRS645.

SETTING BANDWIDTH

The external capacitor, C_{OUT} , is used in combination with the on-chip resistor, R_{OUT} , to create a low-pass filter to limit the bandwidth of the ADXRS645 rate response. The -3 dB frequency set by R_{OUT} and C_{OUT} is

$$f_{OUT} = 1/(2 \times \pi \times R_{OUT} \times C_{OUT})$$

This frequency can be well controlled because R_{OUT} has been trimmed during manufacturing to be 180 k $\Omega \pm 1\%$. Any external resistor applied between the RATEOUT pin (D2) and SUMJ pin (E2) results in $R_{OUT} = (180 \text{ k}\Omega \times R_{EXT})/(180 \text{ k}\Omega + R_{EXT})$.

In general, an additional filter (in either hardware or software) is added to attenuate high frequency noise arising from demodulation spikes at the 18 kHz resonant frequency of the gyroscope. An RC output filter consisting of a 3.3 k Ω series resistor and 22 nF shunt capacitor (2.2 kHz pole) is recommended.

TEMPERATURE OUTPUT AND CALIBRATION

It is common practice to temperature calibrate gyroscopes to improve their overall accuracy. The ADXRS645 has a temperature proportional voltage output that provides input to such a calibration method. The temperature sensor structure is shown in Figure 21.

The voltage at TEMP (Pin C3) is nominally 2.4 V at 25°C, and $V_{RATIO} = 5$ V. The temperature coefficient is ~9 mV/°C at 25°C. Although the TEMP output is highly repeatable, it has only modest absolute accuracy.

Figure 21. Temperature Sensor Structure

SUPPLY RATIOMETRICITY

The RATEOUT, ST1, ST2, and TEMP signals of the ADXRS645 are ratiometric to the V_{RATIO} voltage, that is, the null voltage, rate sensitivity, and temperature outputs are proportional to V_{RATIO} . Therefore, it is most easily used with a supply ratiometric analog-to-digital converter (ADC), which results in self cancellation of errors due to minor supply variations. There is some small, usually negligible, error due to nonratiometric behavior. Note that, to guarantee full rate range, V_{RATIO} must not be greater than AV_{CC} .

RANGE EXTENSION

The ADXRS645 scale factor can be reduced to extend the measurement range to as much as $\pm 5000^\circ/\text{sec}$ by adding a single 120 k Ω resistor between the RATEOUT and SUMJ pins. If an external resistor is added between the RATEOUT and SUMJ pins, proportionally increase C_{OUT} to maintain correct bandwidth (that is, if adding a 180 k Ω resistor, double C_{OUT}).

SELF-TEST FUNCTION

The ADXRS645 includes a self-test feature that actuates each of the sensing structures and associated electronics in the same manner, as if subjected to angular rate. It is activated by standard logic high levels applied to ST1 (Pin A3), ST2 (Pin B3), or both. ST1 causes the voltage at RATEOUT to change about -1.3 V, and ST2 causes an opposite change of +1.3 V. The self-test response follows the viscosity temperature dependence of the package atmosphere, approximately 0.25%/°C.

Activating both ST1 and ST2 simultaneously is not damaging. ST1 and ST2 are fairly closely matched ($\pm 1\%$), but actuating both simultaneously may result in a small apparent null bias shift proportional to the degree of self-test mismatch.

ST1 and ST2 are activated by applying a voltage equal to V_{RATIO} to the ST1 pin and the ST2 pin. The voltage applied to ST1 and ST2 must never be greater than AV_{CC} .

CONTINUOUS SELF-TEST

The on-chip integration of the ADXRS645 gives it higher reliability than is obtainable with any other high volume manufacturing method. In addition, it is manufactured under a mature BiMOS process that has field proven reliability. As an additional failure detection measure, power-on self-test can be performed. However, some applications may warrant continuous self-test while sensing rate.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
