

General Purpose Base Board for SCALE™-iDriver SID1182K

| | |
|-----------------------------|---|
| Application | General purpose drives, UPS, solar power and others |
| Specification | Suitable for IGBT power modules in various housings Up to 800V DC-link voltage Electrical interfaces Interlock Short-circuit detection with Advanced Soft Shut Down |
| Author | High-Power Application Engineering Department |
| Document Number | RDHP-1608 |
| Revision¹ | A.1 |

¹ The letter refers to the hardware revision. The number refers to the documentation revision.

Scope

This application proposal provides a circuit design for a general purpose base board for driving various IGBT power modules.

The main features of the design are:

- Suitable for IGBT power modules in various housings such as 17mm dual, 17mm six-pack, 62mm, PrimePACK™, etc. with a maximum blocking voltage of 1200V
- Short-circuit detection with Advanced Soft Shut Down (ASSD)
- Electrical command inputs and status outputs
- 0V/5V command input logic
- 0V/5V status output logic
- Minimum pulse suppression
- Interlock of command inputs
- 5V supply voltage
- Single PCB solution with soldered-in gate driver IC

Intellectual Property Licensing

The design proposal, products and applications illustrated herein (including transformer construction and circuits external to the products) may be covered by one or more U.S. and foreign patents, or potentially by pending U.S. and foreign patent applications assigned to Power Integrations.

A complete list of Power Integrations patents may be found at <https://www.power.com/>.

Power Integrations grants its customers a license under certain patent rights as set forth at <https://www.power.com/company/intellectual-property-licensing/>.

Application Conditions

The design is proposed for the following application conditions:

- General purpose applications and IGBT power modules
- Adaptations such as adjustment of gate resistors can easily be done
- Up to 8A peak gate current
- Up to 1W per channel

Design Description

In addition to the following design description, reference to the datasheet of the gate driver IC family is recommended.

Gate Resistors

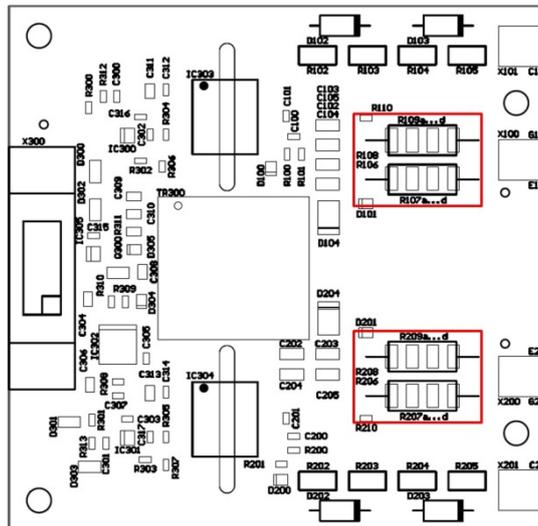

Gate resistor values are not explicitly given as they depend on the IGBT power module used and on the application. Gate resistors of either SMD (size 1206) or THT (size PR02) package can be selected.

Turn-on gate resistors:

| Channel | SMD Package | THT Package |
|---------|-----------------|-------------|
| 1 | R107a ... R107d | R106 |
| 2 | R207a ... R207d | R206 |

Turn-off gate resistors:

| Channel | SMD Package | THT Package |
|---------|-----------------|-------------|
| 1 | R109a ... R109d | R108 |
| 2 | R209a ... R209d | R208 |

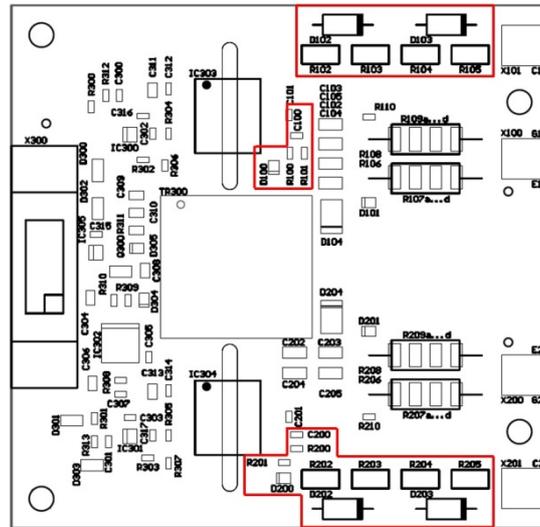

The gate resistors must be determined and assembled by the user.

V_{CEsat} Monitoring

SID1182K gate driver ICs from Power Integrations provide sense inputs for monitoring IGBT short-circuit conditions.

This design offers a V_{CEsat} monitoring function using either a resistor network or high-voltage diodes based on the same layout (Power Integrations recommends using the resistor network implementation as the preferred solution). The assembly variants of either implementation are described in the following table:

| Implementation | C100, C200 | R100, R200 | R101, R201 | R102 ... R105, R202 ... R205 | D102, D103, D202, D203 | D100, D200 |
|---------------------|------------|------------|------------|------------------------------|------------------------|------------|
| Resistor network | 33pF | 120kΩ | n.a. | 330kΩ | n.a. | BAS416 |
| High-voltage diodes | 100pF | 330Ω | 47kΩ | n.a. | UF4007 | n.a. |

The details of the V_{CEsat} monitoring function are described in the corresponding datasheet of the gate driver.

Advanced Soft Shut Down (ASSD)

The driver ICs SID1182K of the SCALE-iDriver family feature an Advanced Soft Shut Down (ASSD) function, which reduces the turn-off di/dt to limit V_{CE} overvoltage spikes as soon as a short-circuit condition is detected. An excessive turn-off overvoltage is therefore avoided and the IGBT is turned off within its safe operating area.

The ASSD function is only active under short-circuit conditions, but not under normal operating conditions (e.g. at nominal current or in over-current conditions), i.e. it is triggered by the V_{CEsat} monitoring function.

The ASSD function may also have performance limitations, such as at high DC-link voltages and/or high commutation loop stray inductances. If the application is operated at these boundary conditions, it is recommended to implement Basic Active Clamping.

For further details concerning the ASSD function refer to the datasheet of the gate driver IC SID1182K.

Interlock

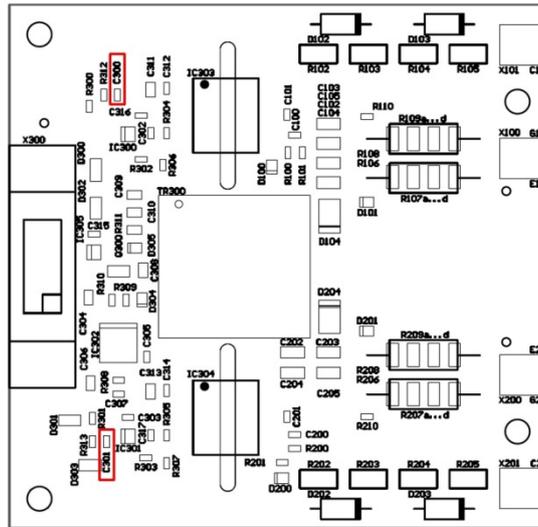

To prevent synchronous switching of the gate driver channels 1 and 2 an interlock circuitry is implemented.

Minimum Pulse Suppression

This design possesses a minimum pulse suppression with a time constant τ of typically 99ns. If required the setting can be changed by adjusting C300 and C301. The time constant τ is given by the following equations:

$$\tau_1 = 99\Omega \cdot C300$$

$$\tau_2 = 99\Omega \cdot C301$$

Recommended values of C300 and C301 are in the range of 1nF ($\tau_x = 99\text{ns}$) to 3.3nF ($\tau_x = 327\text{ns}$), depending on actual application conditions.

Blocking Time

During the blocking time, which is set to typically 10 μs , the gate driver IC ignores incoming command signals. The blocking time starts once a fault was detected by the gate driver IC's secondary side (undervoltage lock-out or a short-circuit event) or when an undervoltage condition ends on the primary side.

For further details refer to the datasheet of the gate driver SID1182K.

Interfaces

Electrical Interfaces

| X300 | | |
|------|-------------|-------------------------------|
| Pin | Designation | Description |
| 1 | V5 | 5V supply (referenced to GND) |
| 3 | SO2 | Status output channel 2 |
| 5 | INB | Command input channel 2 |
| 7 | SO1 | Status output channel 1 |
| 9 | INA | Command input channel 1 |

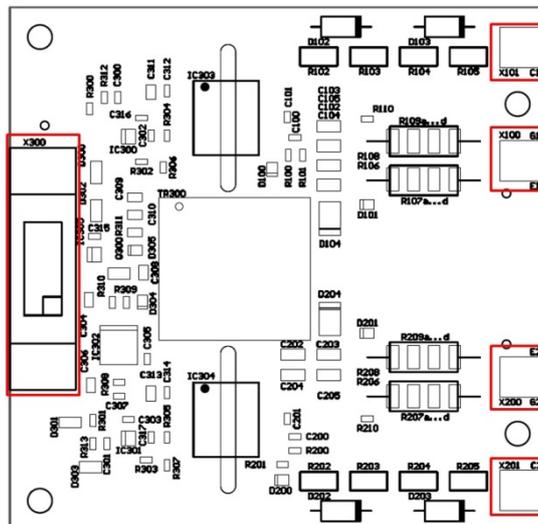

| X300 | | |
|------|-------------|-------------|
| Pin | Designation | Description |
| 2 | GND | Ground |
| 4 | GND | Ground |
| 6 | GND | Ground |
| 8 | GND | Ground |
| 10 | GND | Ground |

| X100 | | |
|------|-------------|-------------------|
| Pin | Designation | Description |
| 1 | E1 | Emitter channel 1 |
| 2 | G1 | Gate channel 1 |

| X101 | | |
|------|-------------|---------------------|
| Pin | Designation | Description |
| 1 | C1 | Collector channel 1 |
| 2 | C1 | Collector channel 1 |

| X200 | | |
|------|-------------|-------------------|
| Pin | Designation | Description |
| 1 | G2 | Gate channel 2 |
| 2 | E2 | Emitter channel 2 |

| X201 | | |
|------|-------------|---------------------|
| Pin | Designation | Description |
| 1 | C2 | Collector channel 2 |
| 2 | C2 | Collector channel 2 |

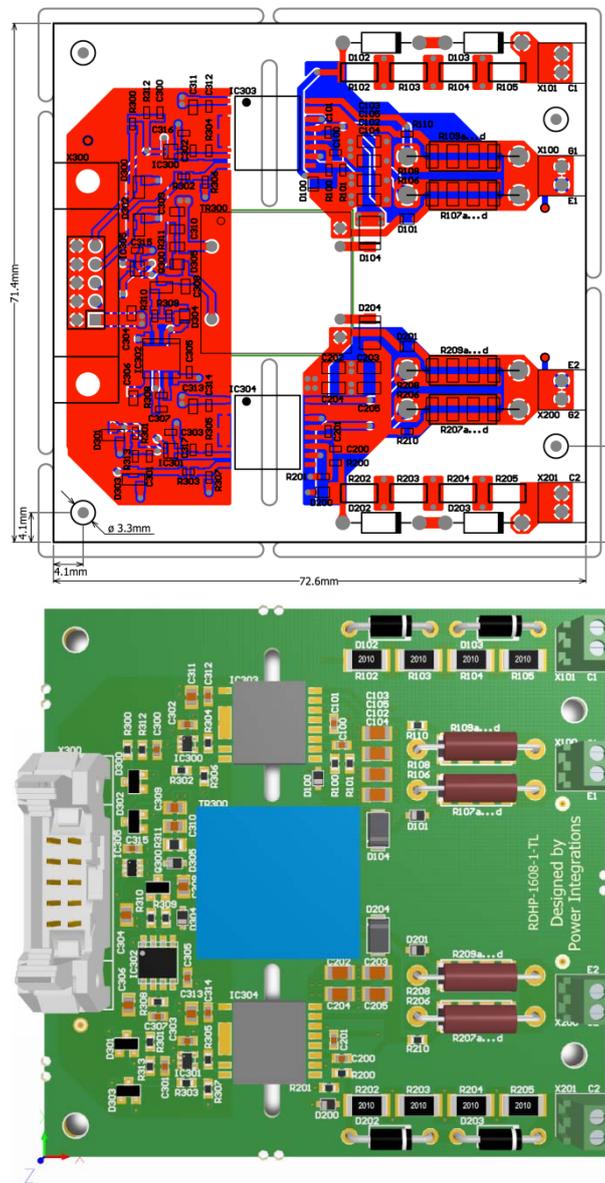

CAD Data

The set of CAD data, which includes the circuit schematics, Gerber files, assembly drawing, BOM and Pick-and-Place file are available as separate documents bundled together with this documentation.

Layout Example

An example for a suitable layout is shown in the following picture. The recommended PCB thickness is 1.55mm.

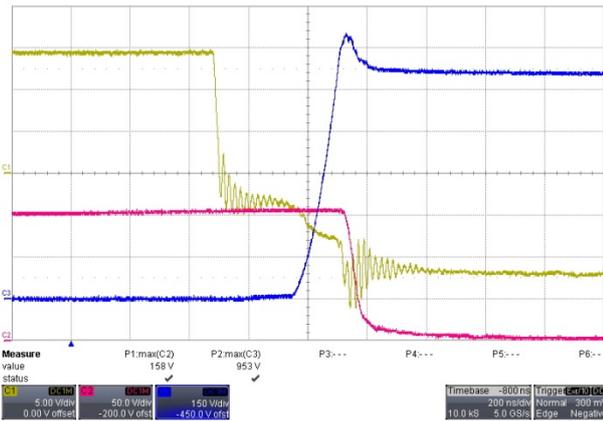

Switching Characteristic

Turn-On/Off

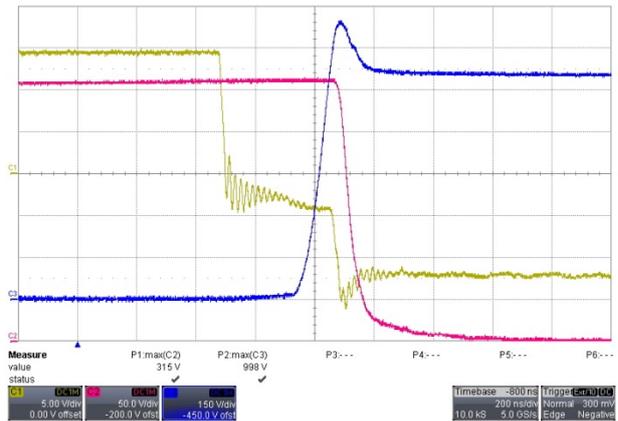

The measurement examples shown with the IGBT power module FF150R12YT3 from Infineon Technologies ($R_{Gon} = 2.4\Omega$ and $R_{Goff} = 2.4\Omega$) were carried out in a double-pulse test using a half-bridge topology setup at room temperature with an initial DC-link voltage of $800V_{DC}$. The adjusted load current is either $150A$ (I_{nom}) or $300A$ ($2x I_{nom}$).

Channel assignment:

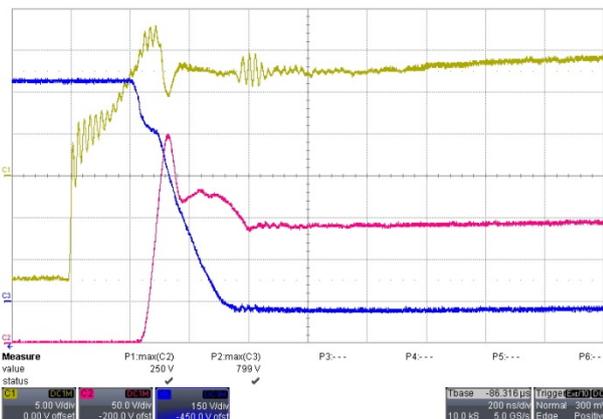

- Channel C1: Gate-emitter voltage
- Channel C2: Collector current [$1V \triangleq 1A$]
- Channel C3: Collector-emitter voltage

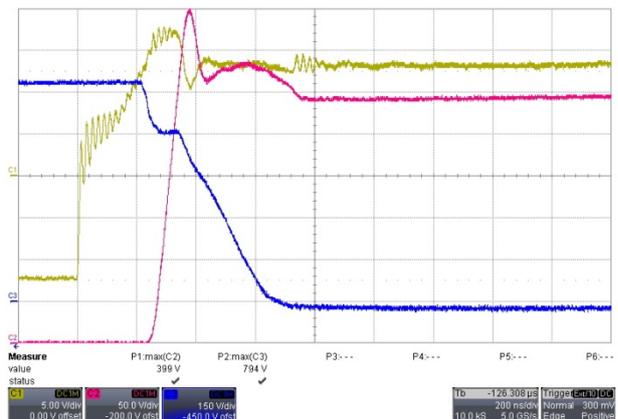

Turn-off bottom side (I_{nom})

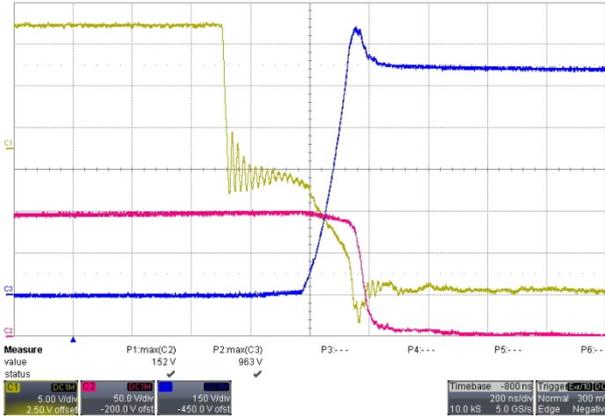

Turn-off bottom side ($2x I_{nom}$)

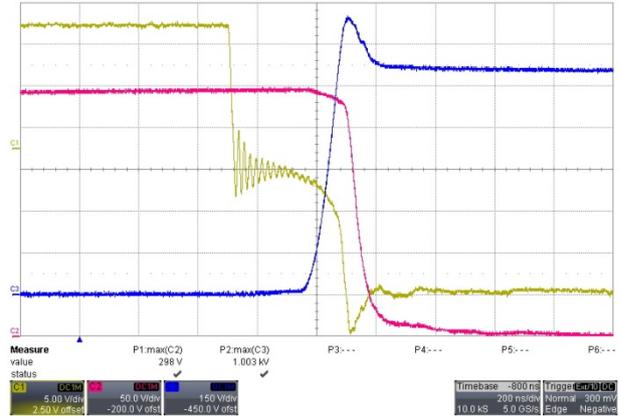

Turn-on bottom side (I_{nom})

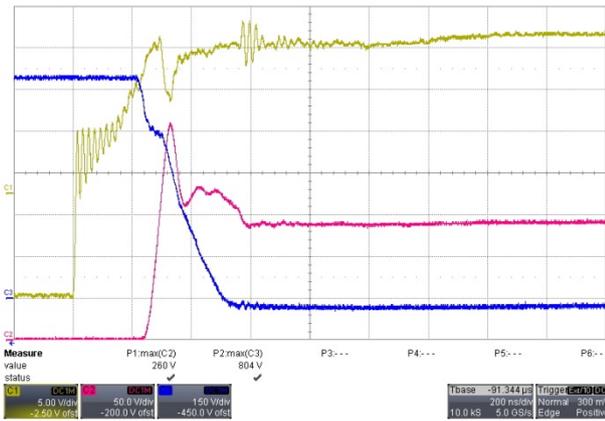

Turn-on bottom side ($2x I_{nom}$)

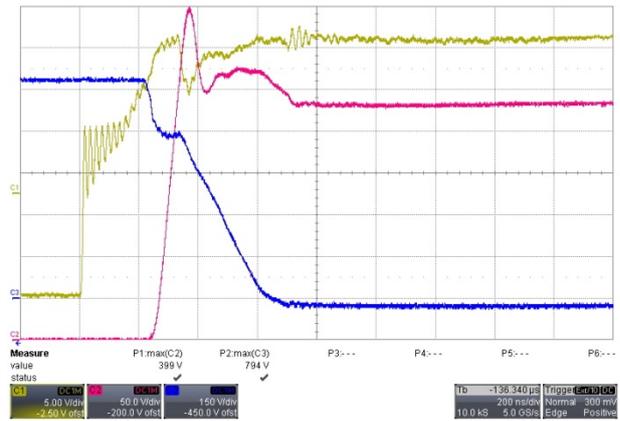

Turn-off top side (I_{nom})

Turn-off top side ($2x I_{nom}$)

Turn-on top side (I_{nom})

Turn-on top side ($2x I_{nom}$)

Short-Circuit

The measurement examples shown with the IGBT power module FF150R12YT3 from Infineon Technologies ($R_{Gon} = 2.4\Omega$ and $R_{Goff} = 2.4\Omega$) were carried out at room temperature with an initial DC-link voltage of $800V_{DC}$.

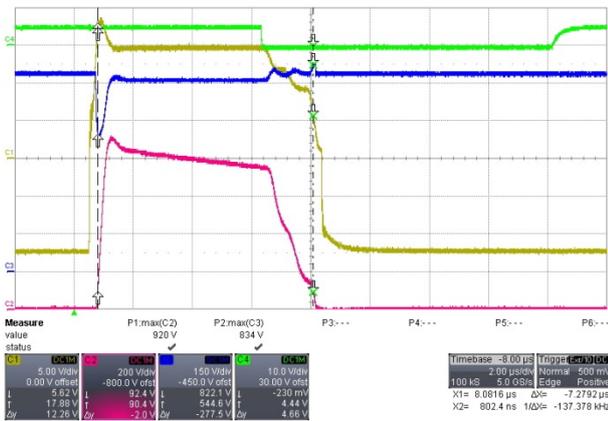

Channel assignment:

Channel C1: Gate-emitter voltage

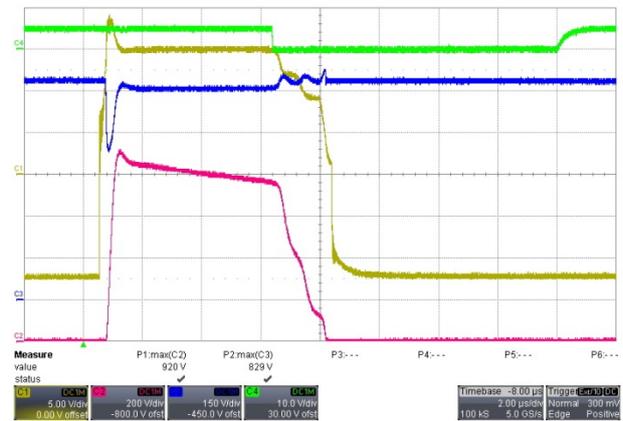

Channel C2: Collector current ($1V \triangleq 1A$)

Channel C3: Collector-emitter voltage

Channel C4: Status output

Bottom side

Top side

Handling

To avoid possible failures caused by ESD, a handling- and assembly-process with persistent ESD protection is necessary /2/.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
