

# FEATURES

Precision Edge®

- Guaranteed AC performance over temperature and voltage:
    - DC-to >2.0GHz throughput
    - <570ps propagation delay (IN-to-Q)
    - <20ps within-device skew
    - <200ps rise/fall time
  - Ultra-low jitter design:
    - <1ps<sub>RMS</sub> cycle-to-cycle jitter
    - <1ps<sub>RMS</sub> random jitter
    - <10ps<sub>PP</sub> deterministic jitter
    - <10ps<sub>PP</sub> total jitter (clock)
  - Unique, patent-pending input termination and VT pin accepts DC- and AC-coupled inputs
  - High-speed LVDS outputs
  - 2.5V voltage supply operation
  - Industrial temperature range: -40°C to +85°C
  - Available in 16-pin (3mm x 3mm) MLF® package

# APPLICATIONS

- Processor clock distribution
  - SONET clock distribution
  - Fibre Channel clock distribution
  - Gigabit Ethernet clock distribution

## DESCRIPTION

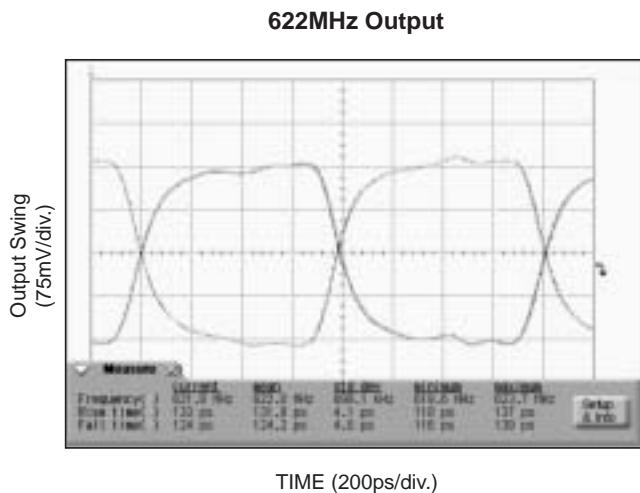

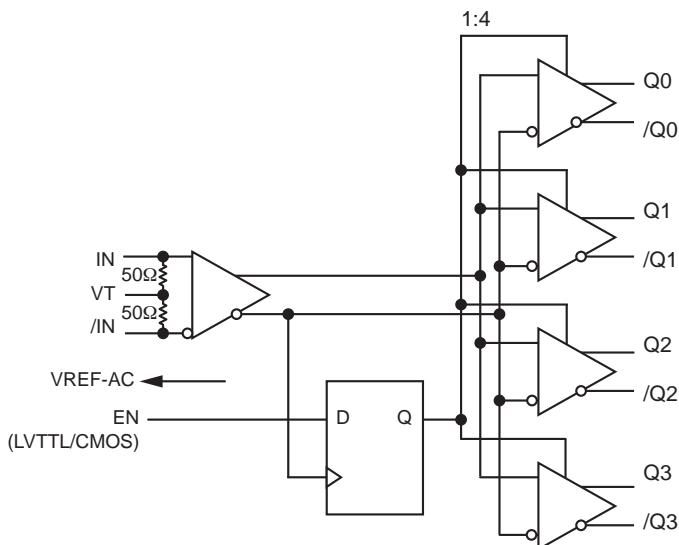

The SY89832U is a 2.5V, high-speed, 2GHz differential LVDS (Low Voltage Differential Swing) 1:4 fanout buffer optimized for ultra-low skew applications. Within device skew is guaranteed to be less than 20ps over supply voltage and temperature.

The differential input buffer has a unique internal termination design that allows access to the termination network through a VT pin. This feature allows the device to easily interface to different logic standards. A VREF-AC reference output is included for AC-coupled applications.

The SY89832U is a part of Micrel's high-speed clock synchronization family. For 3.3V applications, see SY89833L. For applications that require a different I/O combination, consult Micrel's website at [www.micrel.com](http://www.micrel.com), and choose from a comprehensive product line of high-speed, low-skew fanout buffers, translators and clock generators.

## Notes:

1. Contact factory for die availability. Dice are guaranteed at  $T_A = 25^\circ\text{C}$ , DC Electricals only.
2. Tape and Reel.
3. Pb-Free package is recommended for new designs.

## PIN DESCRIPTION

Pin Number	Pin Name	Pin Function
15, 16	Q0, /Q0	LVDS Differential (Outputs): Normally terminated with $100\Omega$ across the pair (Q, /Q). See "LVDS Outputs" section, Figure 2a. Unused outputs should be terminated with a $100\Omega$ resistor across each pair.
1, 2	Q1, /Q1	
3, 4	Q2, /Q2	
5, 6	Q3, /Q3	
8	EN	This single-ended TTL/CMOS-compatible input functions as a synchronous output enable. The synchronous enable ensures that enable/disable will only occur when the outputs are in a logic LOW state. Note that this input is internally connected to a $25k\Omega$ pull-up resistor and will default to logic HIGH state (enabled) if left open.
9, 12	/IN, IN	Differential Inputs: These input pairs are the differential signal inputs to the device. Inputs accept AC- or DC-Coupled differential signals as small as $100\text{mV}$ . Each pin of a pair internally terminates to a VT pin through $50\Omega$ . Note that these inputs will default to an intermediate state if left open. Please refer to the "Input Interface Applications" section for more details.
10	VREF-AC	Reference Voltage: These outputs bias to $V_{CC} - 1.4\text{V}$ . They are used when AC coupling the inputs (IN, /IN). For AC-Coupled applications, connect VREF-AC to VT pin and bypass with $0.01\mu\text{F}$ low ESR capacitor to $V_{CC}$ . See "Input Interface Applications" section for more details. Maximum sink/source current is $\pm 1.5\text{mA}$ . Due to the limited drive capability, each VREF-AC pin is only intended to drive its respective VT pin.
11	VT	Input Termination Center-Tap: Each side of the differential input pair terminates to a VT pin. The VT pins provide a center-tap to a termination network for maximum interface flexibility. See "Input Interface Applications" section for more details.
13	GND	Ground. GND pins and exposed pad must be connected to the most negative potential of the device ground.
7, 14	VCC	Positive Power Supply: Bypass with $0.1\mu\text{F}/0.01\mu\text{F}$ low ESR capacitors and place as close to each VCC pin as possible.

**Notes:**

1. Permanent device damage may occur if absolute maximum ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
2. The data sheet limits are not guaranteed if the device is operated beyond the operating ratings.
3. Package thermal resistance assumes exposed pad is soldered (or equivalent) to the device's most negative potential on the PCB.  $\psi_{JB}$  and  $\theta_{JA}$  values are determined for a 4-layer board in still-air number, unless otherwise stated.
4. The circuit is designed to meet the DC specifications shown in the above table after thermal equilibrium has been established.

## Notes:

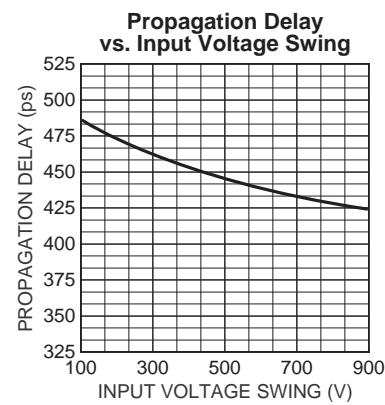

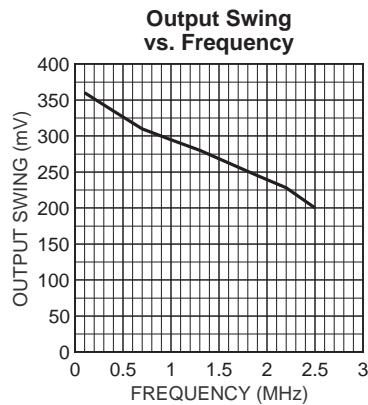

7. High-frequency AC parameters are guaranteed by design and characterization.
8. Within device skew is measured between two different outputs under identical input transitions.
9. Part-to-part skew is defined for two parts with identical power supply voltages at the same temperature and no skew at the edges at the respective inputs.
10. Set-up and hold times apply to synchronous applications that intend to enable/disable before the next clock cycle. For asynchronous applications, set-up and hold times do not apply.
11. Random jitter is measured with a K28.7 pattern, measured at  $\leq f_{MAX}$ .
12. Deterministic jitter is measured at 2.5Gbps with both K28.5 and 2<sup>23</sup>-1 PRBS pattern.
13. Cycle-to-cycle jitter definition: The variation period between adjacent cycles over a random sample of adjacent cycle pairs.  
 $t_{JITTER\_CC} = T_n - T_{n+1}$ , where T is the time between rising edges of the output signal.
14. Total jitter definition: with an ideal clock input frequency of  $\leq f_{MAX}$  (device), no more than one output edge in  $10^{12}$  output edges will deviate by more than the specified peak-to-peak jitter value.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

#### Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помошь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помошь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
