

General Description

The MAX40010 evaluation kit (EV kit) provides a proven design to evaluate the MAX40010 dual-channel, high-precision, high-voltage, current-sense amplifier. This EV kit demonstrates the MAX40010 in a 5-PIN SOT-23 package.

The EV kit PCB comes with a MAX40010TAWT+ installed, which is the 20V/V gain version. Other gain options are available. Contact the factory for the pin-compatible MAX40010LAWT+ ($G = 12.5V/V$), MAX40010FAWT+ ($G = 50V/V$), and MAX40010HAWT+ ($G = 100V/V$).

EV Kit Contents

- MAX40010 EV Kit Board

Features

- Precision, Real-Time Current Monitoring
- +2.7V to +76V Input Common-Mode Range
- Proven PCB Layout
- Fully Assembled and Tested

Ordering Information appears at end of data sheet.

Quick Start

Required Equipment

The following items are required for operation:

- MAX40010 EV kit
- +3.3V, 1A DC power supply
- +5V, 3A DC power supply
- An electronic load capable of sinking 3A (i.e., HP6060B)
- Two digital voltmeters

Procedure

The MAX40010 EV kit is fully assembled and tested. Follow the steps below to verify the board operation.

Caution: Do not turn on power supply or the electronic load until all connections are made.

- 1) Connect the positive terminal of the +3.3V supply to the VDD test point and the negative terminal of the supply to the nearest GND test point.
- 2) Connect the positive terminal of the +5V supply to the VSENSE+ test point and the negative terminal of the supply to the nearest GND test point.
- 3) Set the electronic load to sink 2.5A.
- 4) Connect the positive terminal of the electronic load to the VSENSE- test point and the negative terminal of the supply to the nearest GND test point.
- 5) Connect the first voltmeter between test points RS+ and RS- to measure V_{SENSE} .
- 6) Connect the second voltmeter between VOUT and the nearest GND test points.
- 7) Turn on the power supplies.
- 8) Enable the electronic load.
- 9) Verify that the first voltmeter displays 125mV and the second voltmeter displays 2.5V.

Detailed Description of Hardware

The MAX40010 EV kit provides a proven design to evaluate the MAX40010 high-side, dual-channel, current-sense amplifier, which offers precision accuracy specifications of input offset voltage (V_{OS}) less than $12\mu V$ (max) and gain error less than 0.1% (max).

Applying the V_{RS+} Supply and the Load

The EV kit is installed with a MAX40010TAWT+, which has a 20V/V gain. The current-sense resistors (R_{SENSE}) value is 0.05Ω with $\pm 0.5\%$ tolerance. The V_{OUT} for each channel given by:

$$V_{OUT} = I_{LOAD} \times R_{SENSE} \times A_V$$

where A_V is the gain and I_{LOAD} is the current load applied to the device. Normal operating V_{RS+} and V_{RS-} range is 2.7V to 76V.

Measuring the Load Current

The load current is measured as a voltage drop (V_{SENSE}) across an external sense resistor. This voltage is then amplified by the current-sense amplifier and presented at its V_{OUT} pin. Like all differential amplifiers, the output voltage has two components of error (an offset error and a gain error). The offset error affects accuracy at low currents and a gain error affects accuracy at large currents—both errors effect accuracy at intermediate currents. By minimizing both offset and gain errors, accuracy can be optimized over a wide dynamic range.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
