Common mode voltage ⁸			0.5	1.3	2.0	V

Specification notes:

1. Span is the algebraic difference between the output voltage at full scale pressure and the output at zero pressure. Full scale span is ratiometric to the supply voltage.
2. Linearity is based on **Best fit Straight Line** from the zero to the full scale pressure. Hysteresis is the maximum output difference at any point within the operating pressure range for increasing and decreasing pressure.
3. Maximum error band of the offset voltage or span over the compensated temperature range, relative to the 25°C reading.
4. Long term stability over a six month period.
5. Response time for a step change from the zero pressure to the full scale pressure .
6. The maximum pressure that can be applied without changing the transducer's performance or accuracy.
7. The maximum pressure that can be applied to a transducer without rupture of either the sensing element or transducer case.
8. Common mode voltage as measured from output to ground.
9. Absolute devices with improved zero pressure offset values are available on request. Please contact your nearest Sensorteknics sales office for further information.

PHYSICAL DIMENSIONS

RTO...1 (cell package)

mass: 20 g

Do not touch the diaphragm!

third angle projection
dimensions in inches (mm)

Note: Non-concentricity effects at the diaphragm weld area may cause run out of up to ± 0.006 " between the upper and lower portions of the sensor body (it is recommended to use a counter bore in the mating bore used with this device to allow for this non-concentricity).

RTO...2 (flush mount package)

mass: 18 g

Do not touch the diaphragm!

third angle projection
dimensions in inches (mm)
