\*1 This is the value that measured on measuring board with capacitor of 22 μF at 150mm from output terminal. Measured by 20MHz oscilloscope or Ripple-Noise meter (Equivalent to KEISOKU-GIKEN: RM103). A circuit reducing standby power is built in this unit. Therefore, the internal switch element is intermittent operated, and the Ripple/Ripple Noise specification in load

factor Io=0-35% is different. Please refer to the Instruction Manual 1.7.  
\*2 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25°C, with the input voltage held constant at the rated input/output. Derating is required.  
\*3 When two or more units are operating it may not comply with the IEC61000-3-2.

Please contact us for details.  
\*5 Please contact us about dynamic load and input response.  
\*6 Please contact us about another class.  
\* To meet the specifications. Do not operate over-loaded condition. Parallel operation is not possible.  
\* Derating is required when operated with chassis and cover.  
\* Sound noise may be generated by power supply in case of pulse load.

\*1 Specification is changed at option, refer to Instruction Manual.  
 \*2 This is the value that measured on measuring board with capacitor of 22μF at 150mm from output terminal.  
 \*3 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25°C, with the input voltage held constant  
 \*4 at the rated input/output.  
 \*5 ( ) means peak current. There is a possibility that an internal device is damaged when the specification is exceeded. Please contact us about the detail.  
 \*6 Applicable when remote control (optional) is added.  
 \*7 Please contact us about dynamic load and input response.  
 \*8 Please contact us about another class.  
 \*9 To meet the specifications. Do not operate over-loaded condition.  
 \*10 Parallel operation is not possible.  
 \*11 Derating is required when operated with chassis and cover.  
 \*12 Sound noise may be generated by power supply in case of pulse load.
