TUSB1210-Q1 Standalone USB Transceiver Chip Silicon

1 Features

- AEC-Q100 Qualified with:
  - Temperature Grade 3: –40°C to 85°C
  - HBM ESD Classification 1C
  - CDM ESD Classification C4B
- USB2.0 PHY Transceiver Chip, Designed to Interface with a USB Controller via a ULPI 12-pin Interface, Fully Compliant With:
  - *Universal Serial Bus Specification* Rev. 2.0
  - *On-The-Go Supplement to the USB 2.0 Specification* Rev. 1.3
  - *UTMI+ Low Pin Interface (ULPI) Specification* Rev. 1.1
- DP/DM Line External Component Compensation (Patent #US7965100 B1)
- Interfaces to Host, Peripheral and OTG Device Cores; Optimized for Portable Devices or System ASICs with Built-in USB OTG Device Core
- Complete USB OTG Physical Front-End that Supports Host Negotiation Protocol (HNP) and Session Request Protocol (SRP)
- ULPI Interface:
  - I/O Interface (1.8 V) Optimized for Non-Terminated 50 Ω Line Impedance
  - ULPI CLOCK Pin (60 MHz) Supports Both Input and Output Clock Configurations
  - Fully Programmable ULPI-Compliant Register Set
- Available in a 32-Pin Quad Flat No Lead [QFN (RHB)] Package

2 Applications

- Mobile Phones
- Tablet Devices
- Desktop Computers
- Portable Computers
- Video Game Consoles
- Portable Music Players

3 Description

The TUSB1210-Q1 is a USB2.0 transceiver chip, designed to interface with a USB controller via a ULPI interface. It supports all USB2.0 data rates (High-Speed 480 Mbps, Full-Speed 12 Mbps and Low-Speed 1.5 Mbps), and is compliant to both Host and Peripheral modes. It additionally supports a UART mode and legacy ULPI serial modes.

TUSB1210-Q1 also supports the OTG (Ver1.3) optional addendum to the USB 2.0 Specification, including Host Negotiation Protocol (HNP) and Session Request Protocol (SRP).

The DP/DM external component compensation in the transmitter compensates for variations in the series impendence in order to match with the data line impedance and the receiver input impedance, to limit data reflections, and thereby, improve eye diagrams.

Device Information(1)

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TUSB1210-Q1	VQFN (32)	5.00 mm x 5.00 mm

(1) For all available packages, see the orderable addendum at the end of the datasheet.

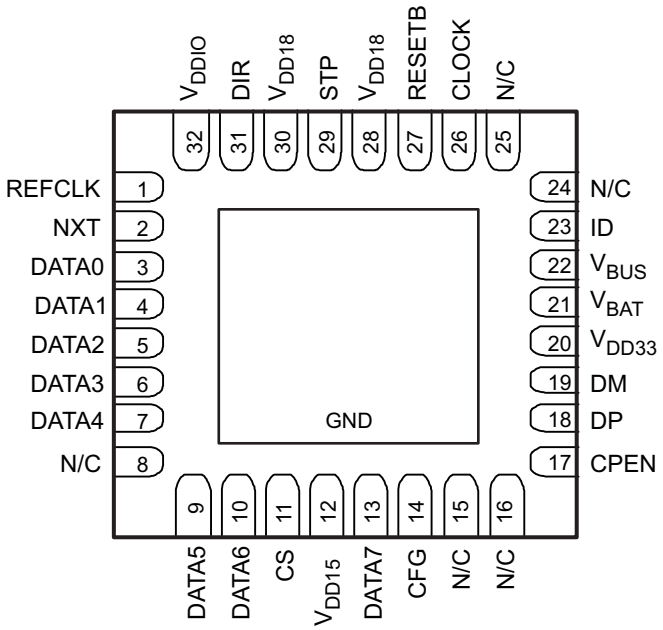
4 Revision History

Changes from Original (September 2014) to Revision A **Page**

- Changed the Features list ... 1
- Deleted 5 paragraphs from the Description following: "TUSB1210-Q1 also supports the OTG (Ver1.3).." ... 1
- Changed the Diagram image ... 1
- Added V_{IL} and V_{IH} to the Recommended Operating Conditions table ... 5
- Changed the Thermal Information table ... 5
- Changed the Digital I/O Electrical Characteristics table ... 5
- Digital IO Electrical Characteristics sections to the Switching Characteristics ... 10
- Added the Typical Characteristics section ... 13
- Added 5 new paragraphs to the Overview section ... 14

5 Pin Configuration and Functions

RHB Package
Top View



Pin Functions

PIN		A/D	TYPE	LEVEL	DESCRIPTION
NAME	NO.				
CFG	14	D	I	V_{DDIO}	REFCLK clock frequency configuration pin. Two frequencies are supported: 19.2 MHz when 0, or 26 MHz when 1.
CLOCK	26	D	O	V_{DDIO}	ULPI 60 MHz clock on which ULPI data is synchronized. Two modes are possible: Input Mode: CLOCK defaults as an input. Output Mode: When an input clock is detected on REFCLK pin (after 4 rising edges) then CLOCK will change to an output.
CPEN	17	D	O	V_{DD33}	CMOS active-high digital output control of external 5V VBUS supply
CS	11	D	I	V_{DDIO}	Active-high chip select pin. When low the IC is in power down and ULPI bus is tri-stated. When high normal operation. Tie to V_{DDIO} if unused.
DATA0	3	D	I/O	V_{DDIO}	ULPI DATA input/output signal 0 synchronized to CLOCK
DATA1	4	D	I/O	V_{DDIO}	ULPI DATA input/output signal 1 synchronized to CLOCK
DATA2	5	D	I/O	V_{DDIO}	ULPI DATA input/output signal 2 synchronized to CLOCK
DATA3	6	D	I/O	V_{DDIO}	ULPI DATA input/output signal 3 synchronized to CLOCK
DATA4	7	D	I/O	V_{DDIO}	ULPI DATA input/output signal 4 synchronized to CLOCK
DATA5	9	D	I/O	V_{DDIO}	ULPI DATA input/output signal 5 synchronized to CLOCK
DATA6	10	D	I/O	V_{DDIO}	ULPI DATA input/output signal 6 synchronized to CLOCK
DATA7	13	D	I/O	V_{DDIO}	ULPI DATA input/output signal 7 synchronized to CLOCK
DIR	31	D	O	V_{DDIO}	ULPI DIR output signal
DM	19	A	I/O	V_{DD33}	DM pin of the USB connector
DP	18	A	I/O	V_{DD33}	DP pin of the USB connector
ID	23	A	I/O	V_{DD33}	Identification (ID) pin of the USB connector
N/C	8	–	–	V_{DDIO}	No connect
N/C	15,16, 24, 24	–	–	–	No connect
NXT	2	D	O	V_{DDIO}	ULPI NXT output signal

Pin Functions (continued)

PIN		A/D	TYPE	LEVEL	DESCRIPTION
NAME	NO.				
REFCLK	1	A	I	3.3 V	V_{DD33} Reference clock input (square-wave only). Tie to GND when pin 26 (CLOCK) is required to be Input mode. Connect to square-wave reference clock of amplitude in the range of 3 V to 3.6 V when Pin 26 (CLOCK) is required to be Output mode. See pin 14 (CFG) description for REFCLK input frequency settings.
RESETB	27	D	I	V_{DDIO}	When low, all digital logic (except 32 kHz logic required for power up sequencing) including registers are reset to their default values, and ULPI bus is tri-stated. When high, normal USB operation.
STP	29	D	I	V_{DDIO}	ULPI STP input signal
V_{BAT}	21	A	power	V_{BAT}	Input supply voltage or battery source
V_{BUS}	22	A	power	V_{BUS}	V_{BUS} pin of the USB connector
VDD15	12	A	power		1.5-V internal LDO output. Connect to external filtering capacitor.
V_{DD18}	28, 30	A	power	V_{DD18}	External 1.8-V supply input. Connect to external filtering capacitor.
V_{DD33}	20	A	power	V_{DD33}	3.3-V internal LDO output. Connect to external filtering capacitor.
V_{DDIO}	32	A	I	V_{DDIO}	External 1.8V supply input for digital I/Os. Connect to external filtering capacitor.
GND	Thermal Pad	A	power	--	Reference Ground

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1)

			MIN	MAX	UNIT
V_{CC}	Main battery supply voltage (2)		0	5	V
	Voltage on any input(3)	Where supply represents the voltage applied to the power supply pin associated with the input	–0.3	1 × V_{CC} +0.3	V
	V_{BUS} input		–2	20	V
	ID, DP, DM inputs	Stress condition specified 24h	–0.3	5.25	V
V_{DDIO}	IO supply voltage	Continuous	–0.3	1.98	V
T_A	Ambient temperature range		–40	85	°C
T_J	Junction temperature range		–40	150	°C
	Ambient temperature for parametric compliance	Parametric compliance	–14	125	°C
		With max 125°C as junction temperature	–40	85	°C
	DP, DM, ID high voltage short circuit	DP, DM or ID pins short circuited to V_{BUS} supply, in any mode of TUSB1210-Q1 operation, continuously for 24 hours	0	5.25	V

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) The product will have negligible reliability impact if voltage spikes of 5.5 V occur for a total (cumulative over lifetime) duration of 5 milliseconds.
(3) Except V_{BAT} input, V_{BUS}, ID, DP, and DM pads

6.2 Handling Ratings

				MIN	MAX	UNIT
T_{stg}	Storage temperature range			–65	150	°C
V_{ESD}	Electrostatic discharge (ESD) performance:	Human body model (HBM), per AEC Q100-002 Classification Level H1C, all pins(1)		1500	1500	V
		Charged device model (CDM), per AEC Q100-011 Classification Level C4B	Corner pins	–750	750	
			Other pins	–500	500	

(1) AEC Q100-002 indicates HBM stressing is done in accordance with ANSI/ESDA/JEDEC JS-001 specifications.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	NOM	MAX	UNIT
V_{BAT}	Battery supply voltage		2.7	3.6	4.8	V
	Battery supply voltage for USB 2.0 compliancy (USB 2.0 certification)	When V_{DD33} is supplied internally	3.15			V
		When V_{DD33} is shorted to V_{BAT} externally	3.05			
V_{DDIO}	Digital IO pin supply		1.71		1.98	V
V_{IL}	Low-level input voltage	CLOCK, STP, DIR, NXT, DATA0 to DATA7			0.35 x V_{DDIO}	V
V_{IH}	High-level output voltage	CLOCK, STP, DIR, NXT, DATA0 to DATA7	0.65 x V_{DDIO}			V
T_A	Ambient temperature range		–40		85	°C

6.4 Thermal Information

THERMAL METRIC[1]		RHB (16 Pins)	UNIT
$R_{\theta JA}$	Junction-to-ambient thermal resistance	34.72	°C/W
$R_{\theta JC(top)}$	Junction-to-case(top) thermal resistance	37.3	
$R_{\theta JB}$	Junction-to-board thermal resistance	10.3	
ψ_{JT}	Junction-to-top characterization parameter	0.5	
ψ_{JB}	Junction-to-board characterization parameter	10.5	
$R_{\theta JC(bottom)}$	Junction-to-case(bottom) thermal resistance	3.6	

(1) For more information about traditional and new thermal metrics, see the *IC Package Thermal Metrics* application report, SPRA953.

6.5 Analog I/O Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER		CONDITIONS	MIN	TYP	MAX	UNIT
CPEN Output Pin						
V_{OL}	CPEN low-level output voltage	I_{OL} = 3 mA			0.3	V
V_{OH}	CPEN high-level output voltage	I_{OH} = –3 mA	V_{DD33} – 0.3			V

6.6 Digital I/O Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
CLOCK						
V_{OL}	Low-level output voltage	Frequency = 60 MHz, Load = 10 pF			0.45	V
V_{OH}	High-level output voltage		V_{DDIO} - 0.45			V
STP, DIR, NXT, DATA0 to DATA7						
V_{OL}	Low-level output voltage	Frequency = 30 MHz, Load = 10 pF			0.45	
V_{OH}	High-level output voltage		V_{DDIO} - 0.45			

6.7 Digital IO Pins (Non-ULPI)

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
CS, CFG, RESETB Input Pins						
V_{IL}	Maximum low-level input voltage				0.35 x V_{DDIO}	V
V_{IH}	Minimum high-level input voltage		0.65 x V_{DDIO}			V
RESETB Input Pin Timing Spec						
$t_{w(POR)}$	Internal power-on reset pulse width			0.2		µs

Digital IO Pins (Non-ULPI) (continued)

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$t_{w(RESET)}$	External RESETB pulse width	Applied to external RESETB pin when CLOCK is toggling.	8			CLOCK cycles

6.8 PHY Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER			COMMENTS	MIN	TYP	MAX	UNIT
LS/FS Single-Ended Receivers							
	USB single-ended receivers						
SK_{WVP_VM}	Skew between VP and VM		Driver outputs unloaded	–2	0	2	ns
V_{SE_HYS}	Single-ended hysteresis			50			mV
V_{IH}	High (driven)			2			V
V_{IL}	Low					0.8	V
V_{TH}	Switching threshold			0.8		2	V
LS/FS Differential Receiver							
V_{DI}	Differential input sensitivity		Ref. USB2.0	200			mV
V_{CM}	Differential Common mode range		Ref. USB2.0	0.8		2.5	V
LS Transmitter							
V_{OL}	Low		Ref. USB2.0	0		300	mV
V_{OH}	High (driven)		Ref. USB2.0	2.8		3.6	V

CEA-2011/UART Transceiver						
	UART Transmitter CEA-2011					
$t_{PH\_UART\_EDGE}$	Phone UART edge rates	DP_PULLDOWN asserted			1	Ms
V_{OH_SER}	Serial interface output high	ISOURCE = 4 mA	2.4	3.3	3.6	V
V_{OL_SER}	Serial interface output low	ISINK = –4 mA	0	0.1	0.4	V
	UART Receiver CEA-2011					
VI_{H_SER}	Serial interface input high	DP_PULLDOWN asserted	2			V
V_{IL_SER}	Serial interface input low	DP_PULLDOWN asserted			0.8	V
V_{TH}	Switching threshold		0.8		2	V

6.9 Pullup/Pulldown Resistors

over operating free-air temperature range (unless otherwise noted)

PARAMETER		COMMENTS	MIN	TYP	MAX	UNIT
RPUI	Bus pullup resistor on upstream port (idle bus)	Bus idle	0.9	1.1	1.575	kΩ
RPUA	Bus pullup resistor on upstream port (receiving)	Bus driven/driver's outputs unloaded	1.425	2.2	3.09	
VIHZ	High (floating)	Pullups/pulldowns on both DP and DM lines	2.7		3.6	V
VPH_DP_UP	Phone D+ pullup voltage	Driver's outputs unloaded	3	3.3	3.6	V
	Pulldown resistors					
RPH_DP_DWN	Phone D+/– pulldown	Driver's outputs unloaded	14.25	18	24.8	kΩ
RPH_DM_DWN						
V_{IHZ}	High (floating)	Pullups/pulldowns on both DP and DM lines	2.7		3.6	V
	D+/– Data line					
C_{INUB}	Upstream facing port	[1.0]		22	75	pF
$V_{OTG\_DATA\_LKG}$	On-the-go device leakage	[2]			0.342	V
Z_{INP}	Input impedance exclusive of pullup/pulldown	Driver's outputs unloaded	300			kΩ

6.10 OTG Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER		COMMENTS		MIN	TYP	MAX	UNIT
OTG V_{BUS} Electrical							
V_{BUS} Comparators							
VA_SESS_VLD	A-device session valid			0.8	1.4	2.0	V
VA_VBUS_VLD	A-device V_{BUS} valid			4.4	4.5	4.625	V
VB_SESS_END	B-device session end			0.2	0.5	0.8	V
VB_SESS_VLD	B-device session valid			2.1	2.4	2.7	V
V_{BUS} Line							
RA_BUS_IN	A-device V_{BUS} input impedance to ground	SRP (V_{BUS} pulsing) capable A-device not driving V_{BUS}		40	70	100	kΩ
RB_SRP_DWN	B-device V_{BUS} SRP pulldown	5.25 V / 8 mA, Pullup voltage = 3 V		0.656	10		kΩ
RB_SRP_UP	B-device V_{BUS} SRP pullup	(5.25 V – 3 V) / 8 mA, Pullup voltage = 3 V		0.281	1	2	kΩ
$t_{RISE\_SRP\_UP\_MAX}$	B-device V_{BUS} SRP rise time maximum for OTG-A communication	0 to 2.1 V with < 13 µF load	RV_{BUS} = 0 Ω and R1KSERIES = '0'			31.4	ms
			RV_{BUS} = 1000 Ω ±10% and R1KSERIES = '1'			57.8	
			RV_{BUS} = 1200 Ω ±10% and R1KSERIES = '1'			64	
			RV_{BUS} = 1800 Ω ±10% and R1KSERIES = '1'			85.4	
$t_{RISE\_SRP\_UP\_MIN}$	B-device V_{BUS} SRP rise time minimum for standard host connection	0.8 to 2 V with > 97 µF load	RV_{BUS} = 0 Ω and R1KSERIES = '0'	46.2			ms
			RV_{BUS} = 1000 Ω ±10% and R1KSERIES = '1'	96			
			RV_{BUS} = 1200 Ω ±10% and R1KSERIES = '1'	100			
			RV_{BUS} = 1800 Ω ±10% and R1KSERIES = '1'	100			

Table 1. OTG ID Electrical

PARAMETER		COMMENTS	MIN	TYP	MAX	UNIT
ID Comparators — ID External Resistors Specifications						
R_{ID_GND}	ID ground comparator	ID_GND interrupt	12	20	28	kΩ
R_{ID_FLOAT}	ID Float comparator	ID_FLOAT interrupt	200		500	kΩ
	ID Line					
$R_{PH\_ID\_UP}$	Phone ID pullup to VPH_ID_UP	ID unloaded (V_{RUSB})	70	90	286	kΩ
$VP_{H\_ID\_UP}$	Phone ID pullup voltage	Connected to V_{RUSB}	2.5		3.2	V
	ID line maximum voltage				5.25	V

6.11 Power Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT
V_{DD33} Internal LDO Regulator Characteristics							
$V_{INVDD33}$	Input voltage	V_{BAT} USB		V_{VDD33} typ + 0.2	3.6	4.5	V
V_{VDD33}	Output voltage	ON mode,	VUSB3V3_VSEL = '000	2.4	2.5	2.6	V
			VUSB3V3_VSEL = '001	2.65	2.75	2.85

			VUSB3V3_VSEL = '110	3.3	3.4	3.5	
			VUSB3V3_VSEL = '111	3.4	3.5	3.6	
I_{VDD33}	Rated output current	V_{BAT} USB	Active mode			15	mA
			Suspend/reset mode			1	
V_{DD15} Internal LDO Regulator Characteristics							
$V_{IN\ VDD15}$	Input voltage		On mode, $V_{IN\ VDD15} = V_{BAT}$	2.7	3.6	4.5	V
V_{VDD15}	Output voltage		$V_{INVDD15\ min} – V_{INVDD15\ max}$	1.45	1.56	1.65	V
I_{VDD15}	Rated output current		On mode			30	mA

6.12 Switching Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
Electrical Characteristics: Clock Input						
	Clock input duty cycle		40		60%	
f_{CLK}	Clock nominal frequency			60		MHz
	Clock input rise/fall time	In % of clock period t_{CLK} (= $1/f_{CLK}$)			10%	
	Clock input frequency accuracy				250	ppm
	Clock input integrated jitter				600	ps rms
Electrical Characteristics: REFCLK						
	REFCLK input duty cycle		40		60%	
f_{REFCLK}	REFCLK nominal frequency	When CFG pin is tied to GND		19.2		MHz
		When CFG pin is tied to V_{DDIO}		26		
	REFCLK input rise/fall time	In % of clock period t_{REFCLK} (= $1/f_{REFCLK}$)			20%	
	REFCLK input frequency accuracy				250	ppm
	REFCLK input integrated jitter				600	ps rms
	REFCLK HIZ Leakage current				3	µA
	REFCLK HIZ Leakage current		–3			
Digital IO Electrical Characteristics: CLOCK						
t_r	Rise time	Frequency = 60 MHz, Load = 10 pF			1	ns
t_f	Fall time	Frequency = 30 MHz, Load = 10 pF			1	ns
Digital IO Electrical Characteristics: STP, DIR, NXT, DATA0 to DATA7						
t_r	Rise time	Frequency = 30 MHz, Load = 10 pF			1	ns
t_f	Fall time				1	ns

6.13 Timing Requirements

PARAMETER		INPUT CLOCK		OUTPUT CLOCK		UNIT
		MIN	MAX	MIN	MAX	
ULPI Interface Timing						
t_{SC}, t_{SD}	Set-up time (control in, 8-bit data in)		3		6	ns
t_{SC}, t_{HD}	Hold time (control in, 8-bit data in)	1.5		0		ns
t_{DC}, t_{DD}	Output delay (control out, 8-bit data out)		6		9	ns
USB UART Interface Timing						
$t_{PH\_DP\_CON}$	Phone D+ connect time	100				ms
$t_{PH\_DISC\_DET}$	Phone D+ disconnect time	150				ms
f_{UART_DFLT}	Default UART signaling rate (typical rate)		9600			bps

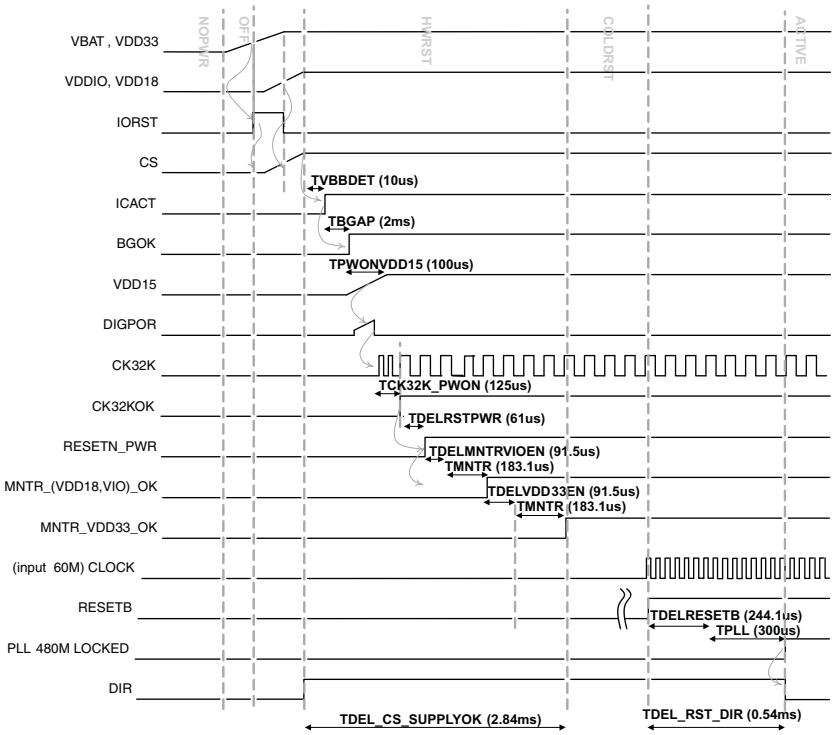

Figure 1. TUSB1210-Q1 Power-Up Timing (ULPI Clock Input Mode)

Table 2. Timers and Debounce

PARAMETER		COMMENTS	MIN	TYP	MAX	UNIT
$t_{DEL\_CS\_SUPPLYOK}$	Chip-select-to-supplies OK delay			2.84	4.10	ms
$t_{DEL\_RST\_DIR}$	RESETB to PHY PLL locked and DIR falling-edge delay			0.54	0.647	ms
t_{VBBDET}	V_{BAT} detection delay			10		µs
t_{BGAP}	Bandgap power-on delay			2		ms
$t_{PWONVDD15}$	V_{DD15} power-on delay			100		µs
$t_{PWONCK32K}$	32-KHz RC-OSC power-on delay			125		µs
$t_{DELRSTPWR}$	Power control reset delay			61		µs
$t_{DELMNTRVIOEN}$	Monitor enable delay			91.5		µs
t_{MNTR}	Supply monitoring debounce			183.1		µs
$t_{DELVDD33EN}$	V_{DD33} LDO enable delay			93.75		µs
$t_{DELRESETB}$	RESETB internal delay			244.1		µs
t_{PLL}	PLL lock time			300		µs

6.13.1 Timing Parameter Definitions

The timing parameter symbols used in the timing requirement and switching characteristic tables are created in accordance with JEDEC Standard 100. To shorten the symbols, some pin names and other related terminologies have been abbreviated as shown in Table 3.

Table 3. Timing Parameter Definitions

LOWERCASE SUBSCRIPTS	
SYMBOL	**PARAMETER**
C	Cycle time (period)
D	Delay time
Dis	Disable time
En	Enable time

FE	First edge
LE	Last edge
Z	High impedance

6.13.2 Interface Target Frequencies

Table 4 assumes testing over the recommended operating conditions.

Table 4. TUSB1210-Q1 Interface Target Frequencies

IO INTERFACE	INTERFACE DESIGNATION		TARGET FREQUENCY 1.5 V
USB	Universal serial bus	High speed	480 Mbits/s
		Full speed	12 Mbits/s
		Low speed	1.5 Mbits/s

6.14 Typical Characteristics

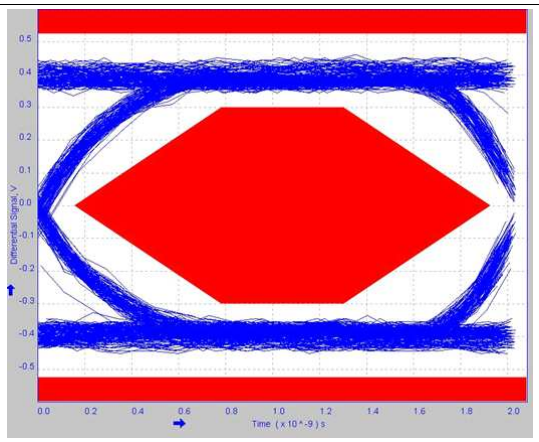

Figure 2. High-Speed Eye Diagram

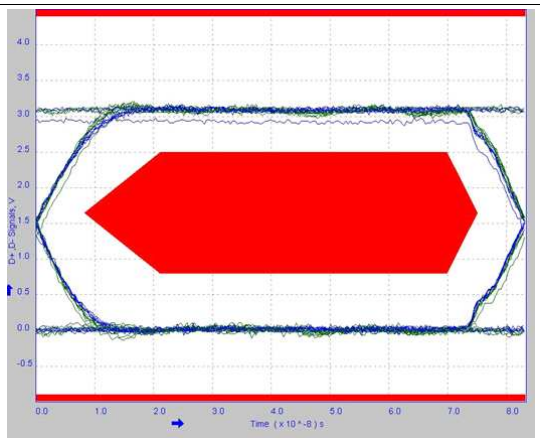

Figure 3. Full-Speed Eye Diagram

7 Detailed Description

7.1 Overview

The TUSB1210-Q1 is a USB2.0 transceiver chip, designed to interface with a USB controller via a ULPI interface. It supports all USB2.0 data rates High-Speed, Full-Speed, and Low-Speed. Compliant to both Host and Peripheral (OTG) modes. It additionally supports a UART mode and legacy ULPI serial modes. TUSB1210-Q1 Integrates a 3.3-V LDO, which makes it flexible to work with either battery operated systems or pure 3.3 V supplied systems. Also, it has an integrated PLL Supporting 2 Clock Frequencies 19.2 MHz/26 MHz. The ULPI clock pin (60 MHz) supports both input and output clock configurations. TUSB1210-Q1 has low power consumption, optimized for portable devices, and complete USB OTG Physical Front-End that supports Host Negotiation Protocol (HNP) and Session Request Protocol (SRP).

TUSB1210-Q1 is optimized to be interfaced through a 12-pin SDR UTMI Low Pin Interface (ULPI), supporting both input clock and output clock modes, with 1.8 V interface supply voltage.

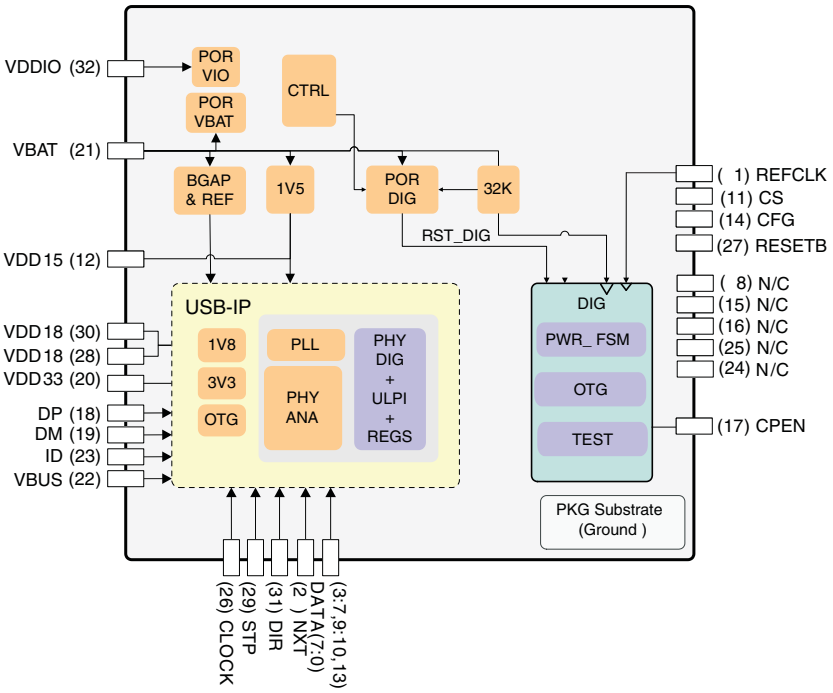
TUSB1210-Q1 integrates a 3.3 V LDO, which makes it flexible to work with either battery operated systems or pure 3.3 V supplied systems. Both the main supply and the 3.3 V power domain can be supplied through an external switched-mode converter for optimized power efficiency.

TUSB1210-Q1 includes a POR circuit to detect supply presence on V_{BAT} and V_{DDIO} pins. TUSB1210-Q1 can be disabled or configured in low power mode for energy saving.

TUSB1210-Q1 is protected against accidental shorts to 5 V or ground on its exposed interface (DP/DM/ID). It is also protected against up to 20 V surges on V_{BUS}.

TUSB1210-Q1 integrates a high-performance low-jitter 480 MHz PLL and supports two clock configurations. Depending on the required link configuration, TUSB1210-Q1 supports both ULPI input and output clock mode : input clock mode, in which case a square-wave 60 MHz clock is provided to TUSB1210-Q1 at the ULPI interface CLOCK pin; and output clock mode in which case TUSB1210-Q1 can accept a square-wave reference clock at REFCLK of either 19.2 MHz, 26 MHz. Frequency is indicated to TUSB1210-Q1 via the configuration pin CFG. This can be useful if a reference clock is already available in the system.

7.2 Functional Block Diagram



7.3 Feature Description

7.3.1 Processor Subsystem

7.3.1.1 Clock Specifications

7.3.1.1.1 USB PLL Reference Clock

The USB PLL block generates the clocks used to synchronize :

- the ULPI interface (60 MHz clock)
- the USB interface (depending on the USB data rate, 480 Mbps, 12 Mbps or 1.5 Mbps)

TUSB1210-Q1 requires an external reference clock which is used as an input to the 480 MHz USB PLL block. Depending on the clock configuration, this reference clock can be provided either at REFCLK pin or at CLOCK pin. By default CLK pin is configured as an input.

Two clock configurations are possible:

- Input clock configuration (see ULPI Input Clock Configuration)
- Output clock configuration (see ULPI Output Clock Configuration)

7.3.1.1.2 ULPI Input Clock Configuration

In this mode REFCLK must be externally tied to GND. CLOCK remains configured as an input.

When the ULPI interface is used in input clock configuration, that is, the 60 MHz ULPI clock is provided to TUSB1210-Q1 on Clock pin, then this is used as the reference clock for the 480 MHz USB PLL block. See *Switching Characteristics*.

7.3.1.1.3 ULPI Output Clock Configuration

In this mode a reference clock must be externally provided on REFCLK pin When an input clock is detected on REFCLK pin then CLK will automatically change to an output, i.e., 60 MHz ULPI clock is output by TUSB1210-Q1 on CLK pin.

Two reference clock input frequencies are supported. REFCLK input frequency is communicated to TUSB1210-Q1 via a configuration pin, CFG, see f_{REFCLK} in Table 11 for frequency correspondence. TUSB1210-Q1 supports square-wave reference clock input only. Reference clock input must be square-wave of amplitude in the range 3 V to 3.6 V. See *Switching Characteristics*.

7.3.1.1.4 Clock 32 kHz

An internal clock generator running at 32 kHz has been implemented to provide a low-speed, low-power clock to the system See *Clock 32 kHz*

7.3.1.1.5 Reset

All logic is reset if CS = 0 or V_{BAT} are not present.

All logic (except 32 kHz logic) is reset if V_{DDIO} is not present.

PHY logic is reset when any supplies are not present (V_{DDIO}, V_{DD15}, V_{DD18}, V_{DD33}) or if RESETB pin is low.

TUSB1210-Q1 may be reset manually by toggling the RESETB pin to GND for at lease 200 ns.

If manual reset via RESETB is not required then RESETB pin may be tied to V_{DDIO} permanently.

7.3.1.2 USB Transceiver

The TUSB1210-Q1 device includes a universal serial bus (USB) on-the-go (OTG) transceiver that supports USB 480 Mb/s high-speed (HS), 12 Mb/s full-speed (FS), and USB 1.5 Mb/s low-speed (LS) through a 12-pin UTMI+ low pin interface (ULPI).

Feature Description (continued)

NOTE

LS device mode is not allowed by a USB2.0 HS capable PHY, therefore it is not supported by TUSB1210-Q1. This is stated in USB2.0 standard Chapter 7, page 119, second paragraph: "*A high-speed capable upstream facing transceiver must not support low-speed signaling mode.*." There is also some related commentary in Chapter 7.1.2.3.

7.3.1.2.1 PHY Electrical Characteristics

The PHY is the physical signaling layer of the USB 2.0. It essentially contains all the drivers and receivers required for physical data and protocol signaling on the DP and DM lines.

The PHY interfaces to the USB controller through a standard 12-pin digital interface called UTMI+ low pin interface (ULPI).

The transmitters and receivers inside the PHY are classified into two main classes.

- The full-speed (FS) and low-speed (LS) transceivers. These are the legacy USB1.x transceivers.
- The HS (HS) transceivers

In order to bias the transistors and run the logic, the PHY also contains reference generation circuitry which consists of:

- A DPLL which does a frequency multiplication to achieve the 480-MHz low-jitter lock necessary for USB and also the clock required for the switched capacitor resistance block.
- A switched capacitor resistance block which is used to replicate an external resistor on chip.

Built-in pullup and pulldown resistors are used as part of the protocol signaling.

Apart from this, the PHY also contains circuitry which protects it from accidental 5-V short on the DP and DM lines.

7.3.1.2.1.1 LS/FS Single-Ended Receivers

In addition to the differential receiver, there is a single-ended receiver (SE–, SE+) for each of the two data lines D+/–. The main purpose of the single-ended receivers is to qualify the D+ and D– signals in the full-speed/low-speed modes of operation. See *PHY Electrical Characteristics*.

7.3.1.2.1.2 LS/FS Differential Receiver

A differential input receiver (Rx) retrieves the LS/FS differential data signaling. The differential voltage on the line is converted into digital data by a differential comparator on DP/DM. This data is then sent to a clock and data recovery circuit which recovers the clock from the data. An additional serial mode exists in which the differential data is directly output on the RXRCV pin. See *Switching Characteristics*.

7.3.1.2.1.3 LS/FS Transmitter

The USB transceiver (Tx) uses a differential output driver to drive the USB data signal D+/– onto the USB cable. The driver's outputs support 3-state operation to achieve bidirectional half-duplex transactions. See *Switching Characteristics*.

7.3.1.2.1.4 HS Differential Receiver

The HS receiver consists of the following blocks:

A differential input comparator to receive the serial data

- A squelch detector to qualify the received data
- An oversampler-based clock data recovery scheme followed by a NRZI decoder, bit unstuffing, and serial-to-parallel converter to generate the ULPI DATAOUT

  See *Switching Characteristics*.

Feature Description (continued)

7.3.1.2.1.5 HS Differential Transmitter

The HS transmitter is always operated via the ULPI parallel interface. The parallel data on the interface is serialized, bit stuffed, NRZI encoded, and transmitted as a dc output current on DP or DM depending on the data. Each line has an effective 22.5-Ω load to ground, which generates the voltage levels for signaling.

A disconnect detector is also part of the HS transmitter. A disconnect on the far end of the cable causes the impedance seen by the transmitter to double thereby doubling the differential amplitude seen on the DP/DM lines of *Switching Characteristics*.

7.3.1.2.1.6 UART Transceiver

In this mode, the ULPI data bus is redefined as a 2-pin UART interface, which exchanges data through a direct access to the FS/LS analog transmitter and receiver. See *Switching Characteristics*.

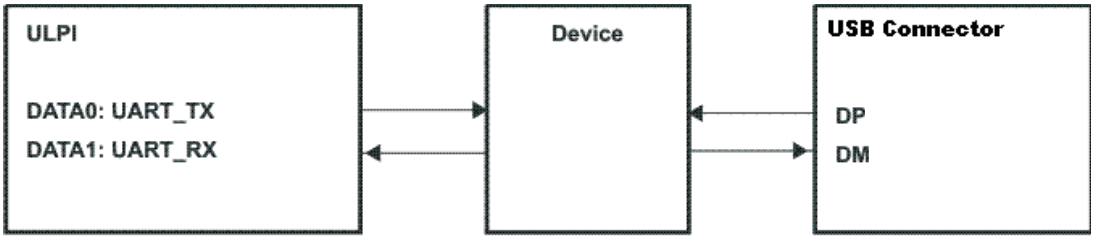


Figure 4. USB UART Data Flow

7.3.1.2.2 OTG Characteristics

The on-the-go (OTG) block integrates three main functions:

- The USB plug detection function on V_{BUS} and ID
- The ID resistor detection
- The V_{BUS} level detection

See *OTG Electrical Characteristics*.

7.4 Device Functional Modes

7.4.1 TUSB1210-Q1 Modes vs ULPI Pin Status

Table 5, Table 6, and Table 7 show the status of each of the 12 ULPI pins including input/output direction and whether output pins are driven to '0' or to '1', or pulled up/pulled down via internal pullup/pulldown resistors.

Note that pullup/pulldown resistors are automatically replaced by driven '1'/'0' levels respectively once internal IORST is released, with the exception of the pullup on STP which is maintained in all modes.

Pin assignment changes in ULPI 3-pin serial mode, ULPI 6-pin serial mode, and UART mode. Unused pins are tied low in these modes as shown below.

Table 5. TUSB1210-Q1 Modes vs ULPI Pin Status:ULPI Synchronous Mode Power-Up

		ULPI SYNCHRONOUS MODE POWER-UP

7.5.5 FUNC_CTRL

ADDRESS OFFSET		0x04					
PHYSICAL ADDRESS		0x04		**INSTANCE**		USB_SCUSB	
DESCRIPTION		Controls UTMI function settings of the PHY.					
TYPE		RW					
WRITE LATENCY							
7	**6**	**5**	**4**	**3**	**2**	**1**	**0**
Reserved	SUSPENDM	RESET	OPMODE		TERMSELECT	XCVRSELECT	

BITS	FIELD NAME	DESCRIPTION	TYPE	RESET
7	Reserved		R	0
6	SUSPENDM	Active low PHY suspend. Put PHY into Low Power Mode. In Low Power Mode the PHY power down all blocks except the full speed receiver, OTG comparators, and the ULPI interface pins. The PHY automatically set this bit to '1' when Low Power Mode is exited.	RW	1
5	RESET	Active high transceiver reset. Does not reset the ULPI interface or ULPI register set. Once set, the PHY asserts the DIR signal and reset the UTMI core. When the reset is completed, the PHY de-asserts DIR and clears this bit. After de-asserting DIR, the PHY re-assert DIR and send an RX command update. Note: This bit is auto-cleared, this explain why it can't be read at '1'.	RW	0
4:03	OPMODE	Select the required bit encoding style during transmit 0x0: Normal operation 0x1: Non-driving 0x2: Disable bit-stuff and NRZI encoding 0x3: Reserved (No SYNC and EOP generation feature not supported)	RW	0x0
2	TERMSELECT	Controls the internal 1.5Kohms pull-up resistor and 45ohms HS terminations. Control over bus resistors changes depending on XcvrSelect, OpMode, DpPulldown and DmPulldown.	RW	0
1:00	XCVRSELECT	Select the required transceiver speed. 0x0: Enable HS transceiver 0x1: Enable FS transceiver 0x2: Enable LS transceiver 0x3: Enable FS transceiver for LS packets (FS preamble is automatically pre-pended)	RW	0x1

7.5.6 FUNC_CTRL_SET

ADDRESS OFFSET	0x05		
PHYSICAL ADDRESS	0x05	**INSTANCE**	USB_SCUSB

DESCRIPTION	This register doesn't physically exist. It is the same as the func_ctrl register with read/set-only property (write '1' to set a particular bit, a write '0' has no-action).

6	DRVVBUSEXTERNAL	Selects between the internal and the external 5 V VBUS supply. 0b: Pin17 (CPEN) is disabled (output GND level). TUSB1210-Q1 does not support internal VBUS supply. 1b: Pin17 (CPEN) is set to '1' (output VDD33 voltage level) if DRVVBUS bit is '1', else Pin17 (CPEN) is disabled (output GND level) if DRVVBUS bit is '0'	RW	0
5	DRVVBUS	VBUS output control bit 0b : do not drive VBUS 1b : drive 5V on VBUS Note: Both DRVVBUS and DRVVBUSEXTERNAL bits must be set to 1 in order to to set Pin17 (CPEN). CPEN pin can be used to enable an external VBUS supply	RW	0
4	CHRGVBUS	Charge VBUS through a resistor. Used for VBUS pulsing SRP. The Link must first check that VBUS has been discharged (see DischrgVbus register bit), and that both D+ and D- data lines have been low (SE0) for 2ms. 0b : do not charge VBUS 1b : charge VBUS	RW	0
3	DISCHRGVBUS	Discharge VBUS through a resistor. If the Link sets this bit to 1, it waits for an RX CMD indicating SessEnd has transitioned from 0 to 1, and then resets this bit to 0 to stop the discharge. 0b : do not discharge VBUS 1b : discharge VBUS	RW	0
2	DMPULLDOWN	Enables the 15k Ohm pull-down resistor on D-. 0b : Pull-down resistor not connected to D-. 1b : Pull-down resistor connected to D-.	RW	1
1	DPPULLDOWN	Enables the 15k Ohm pull-down resistor on D+. 0b : Pull-down resistor not connected to D+. 1b : Pull-down resistor connected to D+.	RW	1
0	IDPULLUP	Connects a pull-up to the ID line and enables sampling of the signal level. 0b : Disable sampling of ID line. 1b : Enable sampling of ID line.	RW	0

7.5.21 USB_INT_LATCH

ADDRESS OFFSET	0x14		
PHYSICAL ADDRESS	0x14	**INSTANCE**	USB_SCUSB
DESCRIPTION	These bits are set by the PHY when an unmasked change occurs on the corresponding internal signal. The PHY will automatically clear all bits when the Link reads this register, or when Low Power Mode is entered. The PHY also clears this register when Serial Mode or Carkit Mode is entered regardless of the value of ClockSuspendM. The PHY follows the rules defined in Table 26 of the ULPI spec for setting any latch register bit. It is important to note that if register read data is returned to the Link in the same cycle that a USB Interrupt Latch bit is to be set, the interrupt condition is given immediately in the register read data and the Latch bit is not set. Note that it is optional for the Link to read the USB Interrupt Latch register in Synchronous Mode because the RX CMD byte already indicates the interrupt source directly

8 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

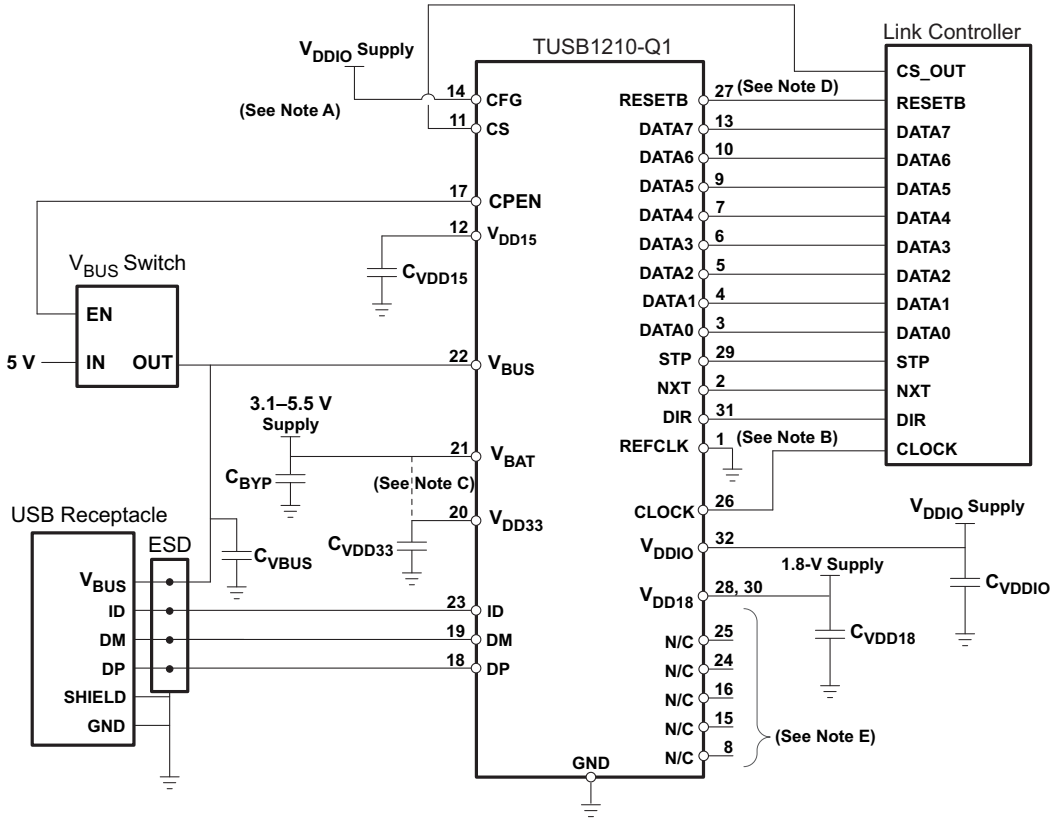
8.1 Application Information

Figure 5 shows the suggested application diagram (Host or OTG, ULPI input-clock mode).

8.2 Typical Application

8.2.1 Host or OTG, ULPI Input Clock Mode Application

Figure 5 shows a suggested application diagram for TUSB1210-Q1 in the case of ULPI input-clock mode (60 MHz ULPI clock is provided by link processor), in Host or OTG application. Note this is just one example, it is of course possible to operate as HOST or OTG while also in ULPI output-clock mode.



A. Pin 11 (CS) : can be tied high to VI_O if CS_OUT pin unavailable; Pin 14 (CFG) : tie-high is Don't Care since ULPI clock is used in input mode

B. Pin 1 (REFCLK) : must be tied low

C. Ext 3 V supply supported

D. Pin 27 (RESETB) can be tied to V_{DDIO} if unused.

E. Pins labeled N/C (no-connect) are truly no-connect, and can be tied or left floating.

Figure 5. Host or OTG, ULPI Input Clock Mode Application Diagram

Typical Application (continued)

8.2.1.1 Design Requirements

Table 9. Design Parameters

DESIGN PARAMETER	EXAMPLE VALUE
V_{BAT}	3.3 V
V_{DDIO}	1.8 V
V_{BUS}	5.0 V
USB Support	HS, FS, LS
USB On the Go (OTG)	Yes
Clock Sources	60 MHz Clock

8.2.1.2 Detailed Design Procedure

Connect the TUSB1210 device as is shown in Figure 5.

Follow the Board Guidelines of the Application Report, SWCA124.

8.2.1.2.1 Unused Pins Connection

- **VBUS:** Input. Recommended to tie to GND if unused. However leaving V_{BUS} floating is also acceptable since internally there is an 80 kΩ resistance to ground.
- **REFCLK:** Input. If REFCLK is unused, and 60 MHz clock is provided by MODEM (60 MHz should be connected to CLOCK pin in this case) then tie REFCLK to GND.
- **CFG:** Tie to GND if REFCLK is 19.2MHz, or tie to V_{DDIO} if REFCLK is 26 MHz. Tie to either GND or V_{DDIO} (doesn't matter which) if REFCLK not used (i.e., ULPI input clock configuration).

8.2.1.3 Application Curve

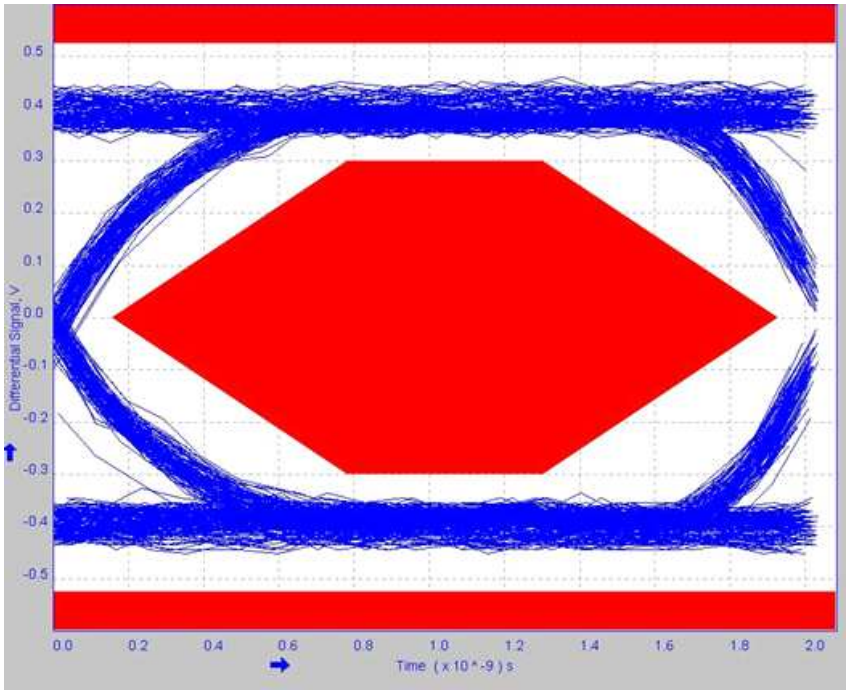


Figure 6. High-Speed Eye Diagram

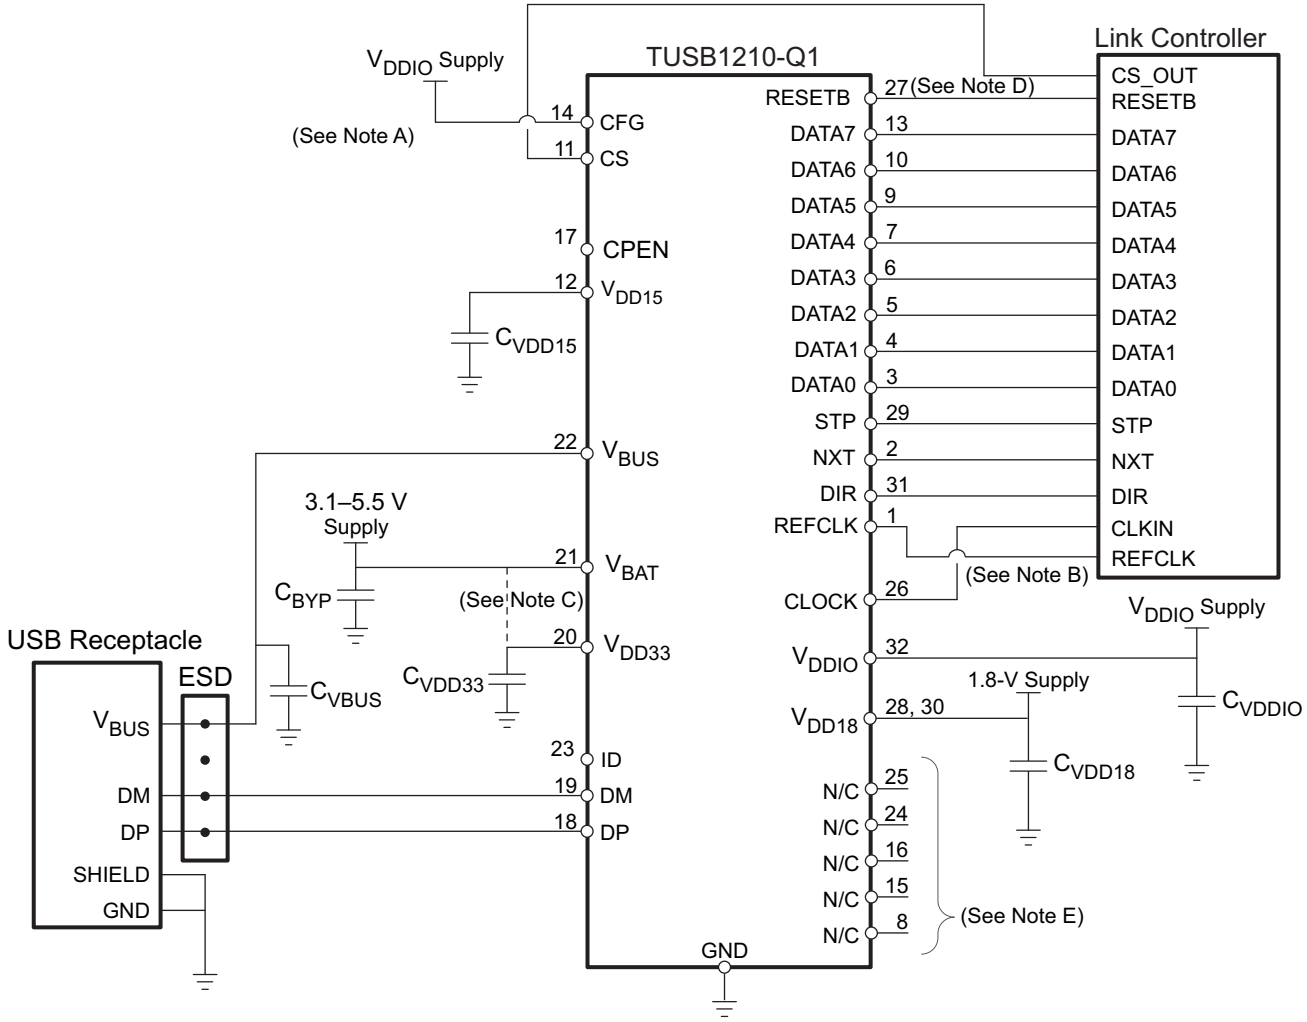
8.2.2 Device, ULPI Output Clock Mode Application

Figure 7 shows a suggested application diagram for TUSB1210-Q1 in the case of ULPI output clock mode (60 MHz ULPI clock is provided by TUSB1210-Q1, while link processor or another external circuit provides REFCLK), in Device mode application. Note this is just one example, it is of course possible to operate as Device while also in ULPI input-clock mode. Refer also to Figure 5.



A. Pin 11 (CS) : can be tied high to V_{IO} if CS_OUT pin unavailable; Pin 14 (CFG) : Tied to V_{DDIO} for 26MHz REFCLK mode here, tie to GND for 19.2MHz mode.

B. Pin 1 (REFCLK) : connect to external 3.3V square-wave reference clock

C. Ext 3 V supply supported

D. Pin 27 (RESETB) can be tied to V_{DDIO} if unused.

E. Pins labeled N/C (no-connect) are truly no-connect, and can be tied or left floating.

Figure 7. Device, ULPI Output Clock Mode Application Diagram

8.2.2.1 Design Requirements

Table 10. Design Parameters

DESIGN PARAMETER	EXAMPLE VALUE
V_{BAT}	3.3 V
V_{DDIO}	1.8 V
V_{BUS}	5.0 V
USB Support	HS, FS, LS
Clock Sources	26 MHz or 19.2 MHz Oscillator

8.2.2.2 Detailed Design Procedure

Connect the TUSB1210 device as is shown in Figure 7.

Follow the Board Guidelines of the Application Report, SWCA124.

8.2.2.2.1 Unused Pins Connection

- **ID:** Input. Leave floating if unused or TUSB1210-Q1 is Device mode only. Tie to GND through RID < 1 kOhm if Host mode.
- **REFCLK:** Input. If REFCLK is unused, and 60 MHz clock is provided by MODEM (60 MHz should be connected to CLOCK pin in this case) then tie REFCLK to GND.
- **CFG:** Tie to GND if REFCLK is 19.2MHz, or tie to V_{DDIO} if REFCLK is 26 MHz. Tie to either GND or V_{DDIO} (doesn't matter which) if REFCLK not used (i.e., ULPI input clock configuration).

8.2.2.3 Application Curve

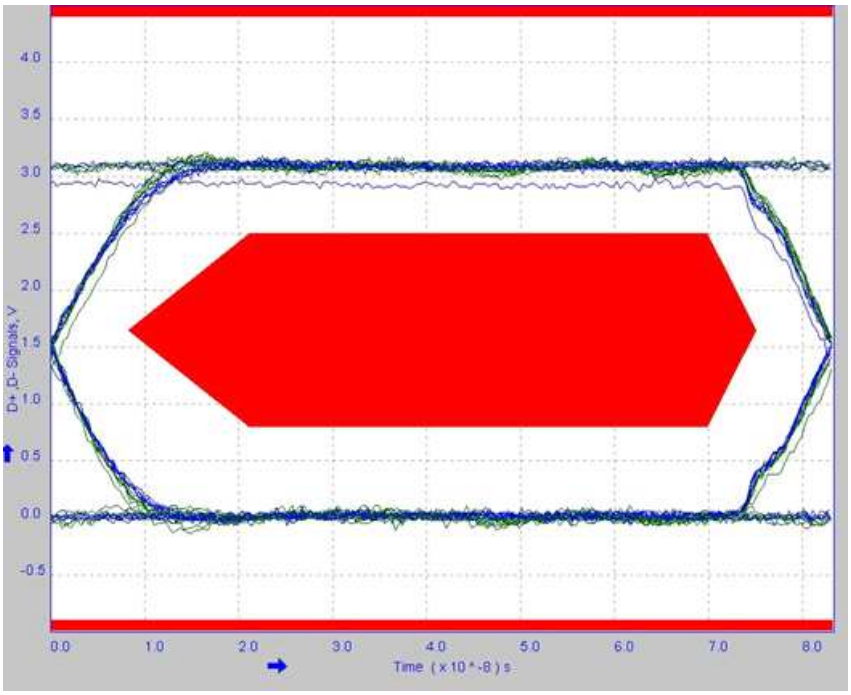


Figure 8. Full-Speed Eye Diagram

8.3 External Components

Table 11. TUSB1210-Q1 External Components

VBUS - OTG	Capacitor	CVBUS	4.7 µF	Range: 1.0 µF to 6.5 µF	Figure 5

9 Power Supply Recommendations

V_{BUS}, and V_{BAT}, and V_{DDIO}, are needed for power the TUSB1210-Q1. Recommended operation is for V_{BAT} to be present before V_{DDIO}. Applying V_{DDIO} before V_{BAT} to TUSB1210 is not recommended as there is a diode from V_{DDIO} to V_{BAT} which will be forward biased when V_{DDIO} is present but V_{BAT} is not present. TUSB1210-Q1 does not strictly require V_{BUS} to function.

9.1 TUSB1210 Power Supply

- The V_{DDIO} pins of the TUSB1210-Q1 supply 1.8 V (nominal) power to the core of the TUSB1210-Q1. This power rail can be isolated from all other power rails by a ferrite bead to reduce noise.
- The V_{BAT} pin of the TUSB1210-Q1 supply 3.3 V (nominal) power rail to the TUSB1210-Q1. This power rail can be isolated from all other power rails by a ferrite bead to reduce noise.
- The V_{BUS} pin of the TUSB1210-Q1 supply 5.0 V (nominal) power rail to the TUSB1210-Q1. This pin is normally connected to the V_{BUS} pin of the USB connector.
- The V_{BUS} pin of the TUSB1210-Q1 supply 5.0 V (nominal) power rail to the TUSB1210-Q1. This pin is normally connected to the V_{BUS} pin of the USB connector.

9.2 Ground

It is recommended that almost one board ground plane be used in the design. This provides the best image plane for signal traces running above the plane. An earth or chassis ground is implemented only near the USB port connectors on a different plane for EMI and ESD purposes.

9.3 Power Providers

Table 13 is a summary of TUSB1210-Q1 power providers.

Table 13. Power Providers(1)

NAME	USAGE	TYPE	TYPICAL VOLTAGE (V)	MAXIMUM CURRENT (mA)
V_{DD15}	Internal	LDO	1.5	50
V_{DD18}	External	LDO	1.8	30
V_{DD33}	Internal	LDO	3.1	15

(1) V_{DD33} may be supplied externally, or by shorting the V_{DD33} pin to V_{BAT} pin provided V_{BAT} min is in range [3.2 V : 3.6 V]. Note that the V_{DD33} LDO will always power-on when the chip is enabled, irrespective of whether V_{DD33} is supplied externally or not. In the case the V_{DD33} pin is not supplied externally in the application, the electrical specs for this LDO are provided below.

9.4 Power Modules

9.4.1 V_{DD33} Regulator

The V_{DD33} internal LDO regulator powers the USB PHY, charger detection, and OTG functions of the USB subchip inside TUSB1210-Q1. Power Characteristics describes the regulator characteristics.

V_{DD33} regulator takes its power from V_{BAT}.

Since the USB2.0 standard requires data lines to be biased with pullups biased from a supply greater than 3 V, and since V_{DD33} regulator has an inherent voltage drop from its input, V_{BAT}, to its regulated output, TUSB1210-Q1 will not meet USB 2.0 Standard if operated from a battery whose voltage is lower than 3.3 V.

9.4.2 V_{DD18} Supply

The V_{DD18} supply is powered externally at the V_{DD18} pin. See Table 11 for external components.

9.4.3 V_{DD15} Regulator

The V_{DD15} internal LDO regulator powers the USB subchip inside TUSB1210-Q1. Power Characteristics describes the regulator characteristics.

9.5 Power Consumption

Table 14 describes the power consumption depending on the use cases.

NOTE

The typical power consumption is obtained in the nominal operating conditions and with the TUSB1210-Q1 standalone.

Table 14. Power Consumption

MODE	CONDITIONS	SUPPLY	TYPICAL CONSUMPTION	UNIT
OFF Mode	V_{BAT} = 3.6 V, V_{DDIO} = 1.8 V, V_{DD18} = 1.8 V, CS = 0 V	I_{VBAT}	8	µA
		I_{VDDIO}	3	
		I_{VDD18}	5	
		I_{TOTAL}	16	
Suspend Mode	V_{BUS} = 5 V, V_{BAT} = 3.6 V, V_{DDIO} = 1.8 V, No clock	I_{VBAT}	204	µA
		I_{VDDIO}	3	
		I_{VDD18}	3	
		I_{TOTAL}	210	
HS USB Operation (Synchronous Mode)	V_{BAT} = 3.6 V, V_{DDIO} = 1.8 V, V_{DD18} = 1.8 V, active USB transfer	I_{VBAT}	24.6	mA
		I_{VDDIO}	1.89	
		I_{VDD18}	21.5	
		I_{TOTAL}	48	
FS USB Operation (Synchronous Mode)	V_{BAT} = 3.6 V, V_{DDIO} = 1.8 V, active USB transfer	I_{VBAT}	25.8	mA
		I_{VDDIO}	1.81	
		I_{VDD18}	4.06	
		I_{TOTAL}	31.7	
Reset Mode	RESETB = 0 V, V_{BUS} = 5 V, V_{BAT} = 3.6 V, V_{DDIO} = 1.8 V, No clock	I_{VBAT}	237	µA
		I_{VDDIO}	3	
		I_{VDD18}	3	
		I_{TOTAL}	243	

10 Layout

10.1 Layout Guidelines

- The V_{DDIO} pins of the TUSB1210-Q1 supply 1.8-V (nominal) power to the core of the TUSB1210-Q1. This power rail can be isolated from all other power rails by a ferrite bead to reduce noise.
- The V_{BAT} pin of the TUSB1210-Q1 supply 3.3-V (nominal) power rail to the TUSB1210-Q1. This power rail can be isolated from all other power rails by a ferrite bead to reduce noise.
- The V_{BUS} pin of the TUSB1210-Q1 supply 5-V (nominal) power rail to the TUSB1210-Q1. This pin is normally connected to the V_{BUS} pin of the USB connector.
- All power rails require 0.1 µF decoupling capacitors for stability and noise immunity. The smaller decoupling capacitors should be placed as close to the TUSB1210-Q1 power pins as possible with an optimal grouping of two of differing values per pin.

10.2 Layout Example

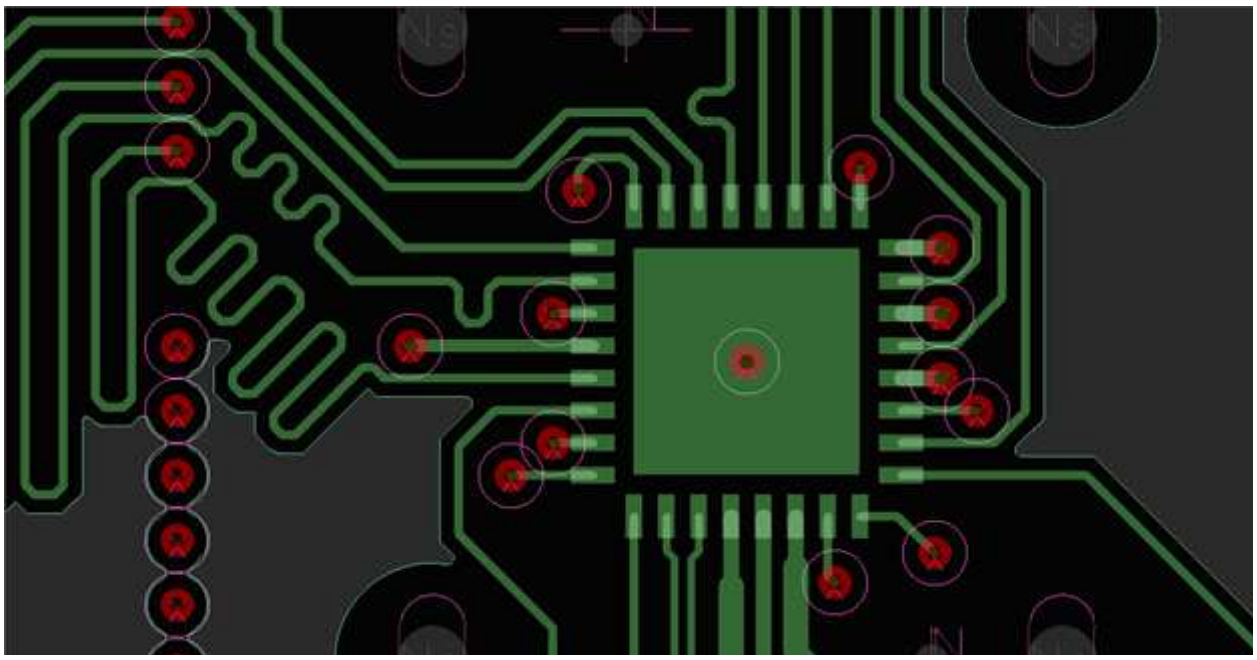

Figure 9. TUSB1210-Q1 Layout Example

11 Device and Documentation Support

11.1 Documentation Support

SLLZ066 ***Silicon Errata.*** Describes the known exceptions to the functional specifications for the TUSB1210-Q1.

11.2 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

TI E2E™ Online Community ***TI's Engineer-to-Engineer (E2E) Community.*** Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

TI Embedded Processors Wiki ***Texas Instruments Embedded Processors Wiki.*** Established to help developers get started with Embedded Processors from Texas Instruments and to foster innovation and growth of general knowledge about the hardware and software surrounding these devices.

11.3 Trademarks

E2E is a trademark of Texas Instruments.
All other trademarks are the property of their respective owners.

11.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

11.5 Glossary

11.5.1 Glossary

SLYZ022 — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

12 Mechanical, Packaging, and Orderable Information

12.1 Via Channel

The T package has been specially engineered with Via Channel technology. This allows larger than normal PCB via and trace sizes and reduced PCB signal layers to be used in a PCB design with the 0.65-mm pitch package, and substantially reduces PCB costs. It allows PCB routing in only two signal layers (four layers total) due to the increased layer efficiency of the Via Channel BGA technology.

Via Channel technology implemented on the [*your package*] package makes it possible to build an [*your device*]-based product with a 4-layer PCB, but a 4-layer PCB may not meet system performance goals. Therefore, system performance using a 4-layer PCB design must be evaluated during product design.

12.2 Packaging Information

The following pages include mechanical packaging and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TUSB1210BRHBRQ1	ACTIVE	VQFN	RHB	32	3000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR	-40 to 85	T1210Q1	Samples
TUSB1210BRHBTQ1	ACTIVE	VQFN	RHB	32	250	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR	-40 to 85	T1210Q1	Samples

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

C. QFN (Quad Flatpack No–Lead) Package configuration.
D. The package thermal pad must be soldered to the board for thermal and mechanical performance.
E. See the additional figure in the Product Data Sheet for details regarding the exposed thermal pad features and dimensions.
F. Falls within JEDEC MO–220.

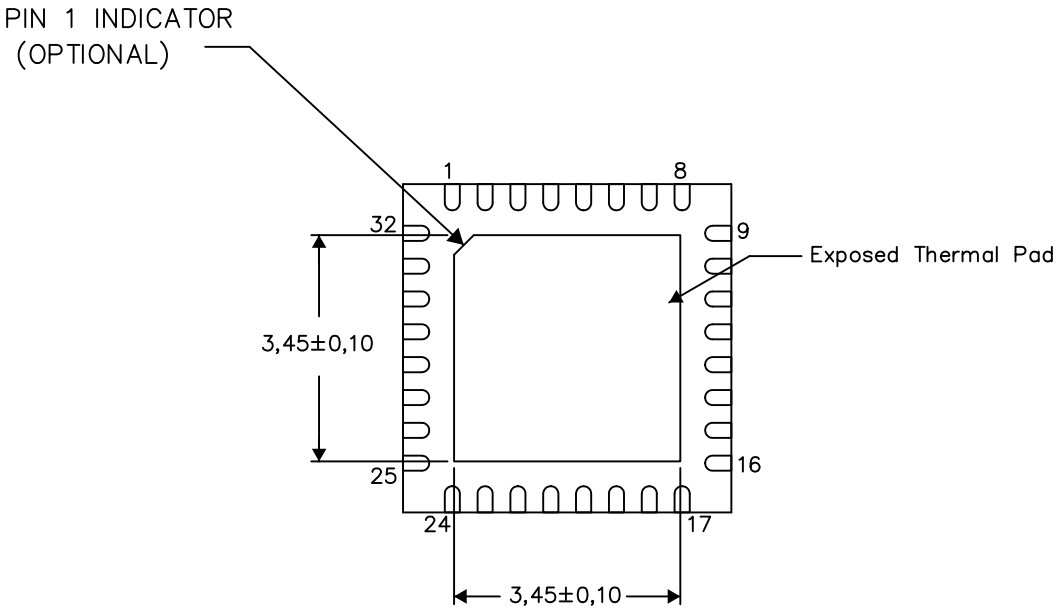
RHB (S–PVQFN–N32) PLASTIC QUAD FLATPACK NO–LEAD

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No–Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.



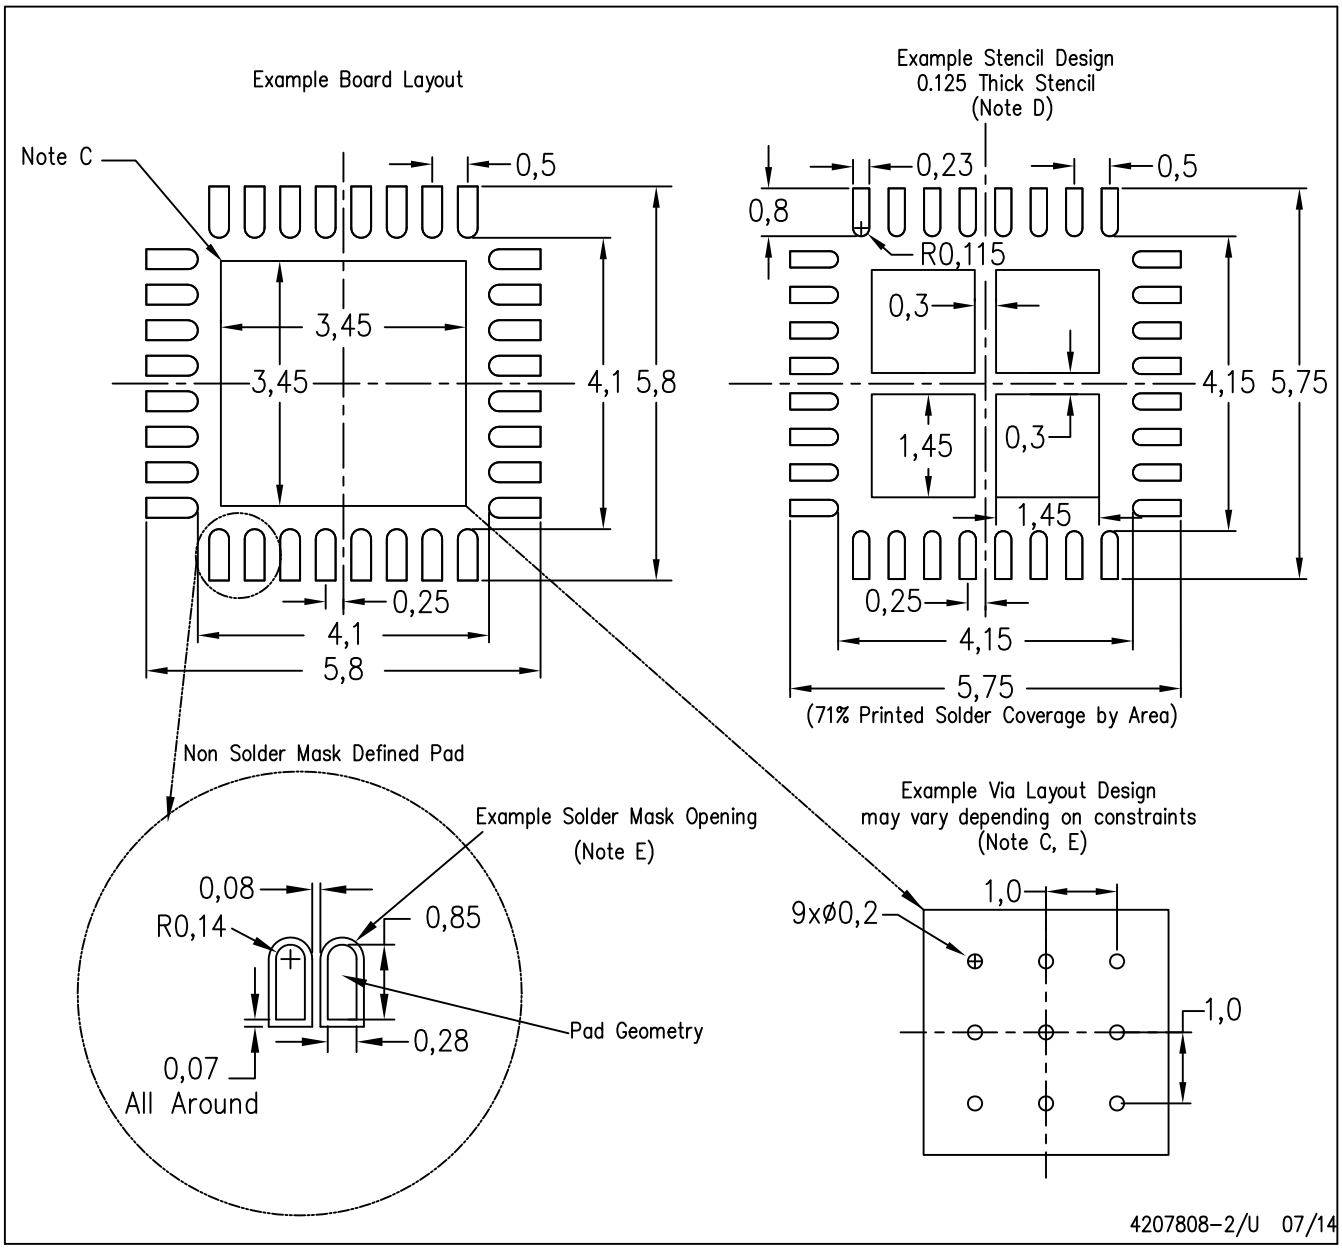
Bottom View

Exposed Thermal Pad Dimensions

4206356–2/AB 07/14

NOTE: A. All linear dimensions are in millimeters

RHB (S–PVQFN–N32) PLASTIC QUAD FLATPACK NO–LEAD



NOTES:
A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, Quad Flat–Pack Packages, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at www.ti.com <http: //www.ti.com>.
D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
E. Customers should contact their board fabrication site for recommended solder mask tolerances and via tenting recommendations for any larger diameter vias placed in the thermal pad.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have ***not*** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.

Компания «ЭлектроПласт» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Оперативные поставки широкого спектра электронных компонентов отечественного и импортного производства напрямую от производителей и с крупнейших мировых складов;
- Поставка более 17-ти миллионов наименований электронных компонентов;
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- Лицензия ФСБ на осуществление работ с использованием сведений, составляющих государственную тайну;
- Поставка специализированных компонентов (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Aeroflex, Peregrine, Syfer, Eurofarad, Texas Instrument, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits,General Dynamics и др.);

Помимо этого, одним из направлений компании «ЭлектроПласт» является направление «Источники питания». Мы предлагаем Вам помощь Конструкторского отдела:

- Подбор оптимального решения, техническое обоснование при выборе компонента;
- Подбор аналогов;
- Консультации по применению компонента;
- Поставка образцов и прототипов;
- Техническая поддержка проекта;
- Защита от снятия компонента с производства.
